```

To assist bib2gls, v1.08 introduces the `record` option, which will write information to the aux file whenever an entry needs to be indexed.

```

\@glxtr@record Does nothing by default.
\newcommand*\@glxtr@record}[3]{}

```

```

\glxtr@recordsee Does nothing by default.
\newcommand*\glxtr@recordsee}[2]{}

```

```

\@glxtr@defaultnumberformat
\newcommand*\@glxtr@defaultnumberformat}{glsnumberformat}%

```

```

\GlsXtrSetDefaultNumberFormat
\newcommand*\GlsXtrSetDefaultNumberFormat}[1]{%
\renewcommand*\@glxtr@defaultnumberformat}{#1}%
}%

```

The `record` option is somewhat problematic. On the first \LaTeX run the entries aren't defined. This isn't as straight-forward as commands like `\cite` since attributes associated with the entry's category may switch off the indexing or the entry's glossary type might require a particular counter. This kind of information can't be determined until the entry has been defined. So there are two different commands here. One that's used if the entry hasn't been defined, which tries to use sensible defaults, and one which is used when the entry has been defined.

```

\@glxtr@do@record@wrglossary The record=only option sets \@do@wrglossary to this command, which means
it's done within \glsadd and \gls@link, and so is only done if the entry exists.

```

```

\newcommand*\@glxtr@do@record@wrglossary}[1]{%
\begingroup
\ifKV@glslink@noindex
\else

\protected@edef\@gls@label{\glsdetoklabel{#1}}%
\let\glslabel\@gls@label
\glswriteentry{#1}%
{%
\ifdefempty{\@glxtr@thevalue}%
{%
\ifx\@glxtr@org@theHvalue\@glxtr@theHvalue
\else
\let\theHglseentrycounter\@glxtr@theHvalue
\fi
}
}
\fi
}

```

```

\glxtr@saveentrycounter
\let\@do@wrglossary\glxtr@dorecord
}%
{%
\let\theglentrycounter\glxtr@thevalue
\let\theHglentrycounter\glxtr@theHvalue
\let\@do@wrglossary\glxtr@dorecordnodefer
}%
\ifx\glxtr@record@setting\glxtr@record@setting@alsoindex
\glxtr@do@wrglossary{#1}%
\else
\@glxtrwrglossmark

```

Increment associated counter.

```

\glxtr@inc@wrglossaryctr{#1}%
\@do@wrglossary
\fi
}%
\fi
\endgroup
}

```

`\glxtr@do@alsoindex@wrglossary` The `record=alsoindex` option needs to both record and index.

```

\newcommand*\glxtr@do@alsoindex@wrglossary}[1]{%
\glxtr@do@wrglossary{#1}%
\glxtr@do@record@wrglossary{#1}%
}

```

`\@glxtr@record` The `record=only` option sets `\glxtr@record` to this. This performs the recording if the entry *doesn't exist* and is done at the start of `\gls@field@link` and commands like `\gls@` (before the existence test). This means that it disregards the `wrgloss` key.

The first argument is the option list (as passed in the first optional argument to commands like `\gls`). This allows the `noindex` setting to be picked up. The second argument is the entry's label. The third argument is the key family (`glslink` in most cases, `glossadd` for `\glsadd`).

```

\newcommand*\@glxtr@record}[3]{%

```

Save the label in case it's needed. This needs to be outside the existence check to allow the post-link hook to reference it.

```

  }{\theglentrycounter}%
\fi
\fi
\@glxtr@counterrecordhook
}

```

`\@glsxtr@ifnum@mmode` Check if in a numbered maths environment. The `amsmath` package is automatically loaded by `datatool-base`, which is required by `glossaries`, so `\ifst@rred` and `\if@display` should both be defined.

```
\newcommand{\@glsxtr@ifnum@mmode}[2]{%
  \ifmmode
    \ifst@rred
      #2%
    \else
```

Non-`amsmath` environments and regular inline math mode isn't flagged as starred by `amsmath`, but we can't use `\mathchoice` in this case as it's not the current style that's relevant. Instead we can use `amsmath`'s `\if@display`. This may not work for environments that aren't provided by `amsmath`.

```
  \if@display #1\else #2\fi
  \fi
\else
  #2%
\fi
}
```

`\@glsxtr@do@nameref@record` With `record=nameref`, the current label information is included in the record, but this may not have been defined, so `\csuse` will prevent an undefined control sequence error and just leave the last two arguments blank if there's no information. In the event that a record is in `amsmath`'s `align` environment `\@currentHref` will be out. There may be other instances where `\@currentHref` is out, so this also saves `\theHglSentrycounter`, which is useful if it can't be obtained by prefixing `\theHglSentrycounter`.

```
\newcommand*{\@glsxtr@do@nameref@record}[5]{%
  \gls@ifnotmeasuring
  {%
    \@bibgls@write@aux{}\string\@glsxtr@record@nameref

Record and index. This option doesn't load `glossaries-extra-bib2gls` as the sorting is performed by `xindy` or `makeindex`. Index in this sense refers to the indexing mechanism used with indexing applications such as `makeindex` and `xindy`, but this could be confused with recording locations so “`alsoindex`” is now deprecated in favour of “`hybrid`”, which is more obvious.

Version 1.06 changes the `docdef` option to a choice rather than boolean setting. The available values are: `false`, `true` or `restricted`. The `restricted` option permits document definitions as long as they occur before the first glossary is displayed.

`\@glsxtr@docdefval` The `docdef` value is stored as an integer: 0 (`false`), 1 (`true`) and 2 (`restricted`).

```
\newcommand*{\@glsxtr@docdefval}{0}
```

Need to provide conditional commands that are backward compatible:

`\if@glsxtrdocdef`

```
\newcommand*{\if@glsxtrdocdef}{\ifnum\@glsxtr@docdefval>0 }
```

`\@glsxtrdocdeftrue`

```
\newcommand*{\@glsxtrdocdeftrue}{\def\@glsxtr@docdefval{1}}
```

`\@glsxtrdocdeffalse`

```
\newcommand*{\@glsxtrdocdeffalse}{\def\@glsxtr@docdefval{0}}
```

`docdef` By default don't allow entries to be defined in the document to encourage the user to define them in the preamble, but if the user is really determined to define them in the document allow them to request this.

```
\define@choicekey{glossaries-extra.sty}{docdef}
[\@glsxtr@docdefsetting\@glsxtr@docdefval]%
{false,true,restricted,atom}[true]%
{%
\ifnum\@glsxtr@docdefval>1\relax
\renewcommand*{\@glsdoifexistsorwarn}{\glsdoifexists}%
\else

```

`\glsxtr@inc@wrglossaryctr` Increments the associated counter if enabled. Does nothing by default. The optional argument is the entry label in case it’s required, but the `wrglossary` counter is globally used by all entries.

```
\newcommand*\glsxtr@inc@wrglossaryctr}[1]{}
```

```
\GlsXtrInternalLocationHyperlink{<counter>}{<prefix>}
{<location>}
```

`\GlsXtrInternalLocationHyperlink`

The first two arguments are always control sequences.

```
\newcommand*\GlsXtrInternalLocationHyperlink}[3]{%
\glsxtrhyperlink{#1#2#3}{#3}%
}
```

`\wrglossary@locationhyperlink`

```
\newcommand*\@glsxtr@wrglossary@locationhyperlink}[3]{%
\pageref{wrglossary.#3}%
}
```

`indexcounter` Define the `wrglossary` counter that's incremented every time an entry is indexed, except for cross-references. This is designed for use with `bib2gls v1.4+`. It can work with the other indexing methods but it will interfere with the number list collation. This option automatically implements `counter=wrglossary`.

Since `glossaries` automatically loads `amsmath`, there may be a problem if the indexing occurs in the `equation` environment, because only one `\label` is allowed in each instance of that environment. It's best to change the counter when in maths mode.

```
\@glsxtr@declareoption{indexcounter}{%
  \glsxtr@doooption{counter=wrglossary}%
  \ifundef\c@wrglossary
  {%
    \newcounter{wrglossary}%
    \renewcommand{\thewrglossary}{\arabic{wrglossary}}%

```

`\@gls@getcounterprefix` This command is provided by the base glossaries package, but is redefined here. The standard indexing methods don't directly store the hypertarget but instead need to split it into the counter, prefix and location parts, which can be reconstituted in the location list. Unfortunately, not all targets are in this form, so the links fail. With `record=nameref`, the complete target name can be saved, so this modification adjusts the warning.

The expansion should now be performed in `\@xp@gls@getcounterprefix`. Any commands that were using `\@gls@getcounterprefix` directly need to be use `\@xp@gls@getcounterprefix` instead.

```

\ifcsundef{@glotype@#1@out}{#3}{#2}%
}
```

\s@ifglossaryexists

```
\newcommand{\s@ifglossaryexists}[3]{%
\ifcsundef{glolist@#1}{#3}{#2}%
}
```

```
}
```

```
\glxtrifemptyglossary{<type>}{<true>}{<false>}
```

`\glxtrifemptyglossary`

Provide command to determine if any entries have been added to the glossary (where the glossary label is provided in the first argument). The entries are stored in the comma-separated list `\glolist@<type>`. If this hasn't been defined, the glossary doesn't exist. If it has been defined and is simply a comma, the glossary exists and is empty. (It's initialised to a comma.)

```
\newcommand{\glxtrifemptyglossary}[3]{%
  \ifcsdef{glolist@#1}%
  {%
    \ifcsstring{glolist@#1}{,}{#2}{#3}%
  }%
  {%
    \glxtrundefaction{Glossary type '#1' doesn't exist}{}%
    #2%
  }%
}
```

```
\GlsXtrIfInGlossary{<label>}{<type>}{<true>}{<false>}
```

`\GlsXtrIfInGlossary`

Test if the given entry is in the given glossary list. This may not correspond to the `type` key as the entry may have been copied to the list. Does `<false>` and issues warning if the glossary doesn't exist.

```
\ExplSyntaxOn
\clist_new:N \__glossariesxtr_glolist_clist
\newcommand*{\GlsXtrIfInGlossary}[4]{%
  \tl_if_exist:cTF { glolist@#2 }
  {

}
```

The name of a text-block control sequence can be stored in a field (given by `\GlsXtrFmtField`). This command can then be used with `\glsxtrfmt` [*options*]{*label*}{*text*} which effectively does `\glslink`[*options*]{*label*}{*cs*}{*text*}} If the field hasn't been set for that entry just *text* is done.

`\GlsXtrFmtField`

```
\newcommand{\GlsXtrFmtField}{useri}
```

`\GlsXtrFmtDefaultOptions`

```
\newcommand{\GlsXtrFmtDefaultOptions}{noindex}
```

```
\glsxtrfmt [options]{entry-label}{text}[insert]
```

`\glsxtrfmt`

The post-link hook isn't done. This now has a starred form that checks for a final optional argument.

```
\newrobustcmd*{\glsxtrfmt}{\@ifstar\s@glsxtrfmt\@glsxtrfmt}
```

`\@glsxtrfmt` Unstarred form.

```
\newcommand*{\@glsxtrfmt}[3][\@]{\@@glsxtrfmt{#1}{#2}{#3}{}}
```

`\s@glsxtrfmt` Starred form.

```
\newcommand*{\s@glsxtrfmt}[3][\@]{%
  \new@ifnextchar[\s@glsxtrfmt{#1}{#2}{#3}]{%
    {\@@glsxtrfmt{#1}{#2}{#3}{}}%
  }
}
```

`\s@glsxtrfmt` Pick up final optional argument.

```
\def\s@@glsxtrfmt#1#2#3[#4]{\@@glsxtrfmt{#1}{#2}{#3}{#4}}
```

`\@@glsxtrfmt` Actual inner working.

```
\newcommand*{\@@glsxtrfmt}[4]{%
```

Since there's no post-link hook to worry about, grouping can be added to provide some protection against nesting (but in general nested link text should be avoided).

```
\begingroup
  \def\glslabel{#2}%
  \glsdoifexistsordo{#2}%
  {%
    \ifglsfield{\GlsXtrFmtField}{#2}%
    {%
      \let\do@gls@link@checkfirsthyper\relax

  {%
    \DTLifinlist{#3}{\glscurrentfieldvalue}{#4}{#5}%
  }%
  {#5}%
}
```

```
\xGlsXtrIfValueInFieldCsvList{<label>}{<field>}{<value>}
{<true>}{<false>}
```

\xGlsXtrIfValueInFieldCsvList

As above but fully expand *<value>*.

```
\newcommand*{\xGlsXtrIfValueInFieldCsvList}{%
  \ifstar\s@\xGlsXtrIfValueInFieldCsvList\@xGlsXtrIfValueInFieldCsvList
}
```

\GlsXtrIfValueInFieldCsvList Unstarred version.

```
\newcommand*{\@xGlsXtrIfValueInFieldCsvList}[5]{%
  \@glsxtrifhasfield{#2}{#1}%
  {%
    \protected@edef\@gls@tmp{#3}%
    \expandafter\DTLifinlist\expandafter{\@gls@tmp}{\glscurrentfieldvalue}{#4}{#5}%
  }%
  {#5}%
}
```

`\GlsXtrIfValueInFieldCsvList` Unstarred version.

```
\newcommand*{\s@GlsXtrIfValueInFieldCsvList}[5]{%
\s@glstrifhasfield{#2}{#1}%
{%
\protected@edef\@gls@tmp{#3}%
\expandafter\DTLifinlist\expandafter{\@gls@tmp}{\glscurrentfieldvalue}{#4}{#5}%
}%
{#5}%
}
```

`\glstrifhasfield`

`\glstrifhasfield{<field>}{<label>}{<true>}{<false>}`

A simpler alternative to `\ifglshasfield` that doesn't complain if the entry or the field doesn't exist. (No mapping is used.) Grouping is added to the unstarred version allow for nested use.

```
\newrobustcmd{\glstrifhasfield}{%
\@ifstar{\s@glstrifhasfield}{\@glstrifhasfield}%
}
```

`\@glstrifhasfield` Unstarred version adds grouping.

```
\newcommand{\@glstrifhasfield}[4]{%
\s@glstrifhasfield{#1}{#2}{#3}{#4}%
}
```

`\s@glstrifhasfield` Starred version omits grouping.

```

  }

```

```
\GlsXtrIfFieldUndef{<field>}{<label>}{<true>}{<false>}
```

\GlsXtrIfFieldUndef

Just uses \ifcsundef.

```

\newcommand{\GlsXtrIfFieldUndef}[2]{%
  \ifcsundef{glo@\glsdetoklabel{#2}@#1}%
}

```

\glsxtrusefield Provide a user-level alternative to \@gls@entry@field. The first argument is the entry label. The second argument is the field label.

```

\newcommand*\glsxtrusefield}[2]{%
  \@gls@entry@field{#1}{#2}%
}

```

\Glsxtrusefield Provide a user-level alternative to \@Gls@entry@field. Now uses \MFUsentencecase in PDF bookmarks.

```

\newcommand*\Glsxtrusefield}[2]{%
  \@Gls@entry@field{#1}{#2}%
}
\glsmfuaddmap{\glsxtrusefield}{\Glsxtrusefield}

```

\GLSxtrusefield As above but convert to all caps. Note that with mfirstuc v2.08+, \mfirstucMakeUppercase is expandable, so therefore \glsuppercase should also be expandable.

```

\newcommand*\GLSxtrusefield}[2]{%
  \glsuppercase{\csuse{glo@\glsdetoklabel{#1}@#2}}%
}
\glsmfublocker{\GLSxtrusefield}

```

\glsxtrentryparentname

```

\newcommand*\glsxtrentryparentname}[1]{%
  \ifcsdef{glo@\glsdetoklabel{#1}@parent}%
    {\csuse{glo@\csuse{glo@\glsdetoklabel{#1}@parent}@name}}%
  }%
}

```

\glsxtrdeffield Just use \csdef to provide a field value for the given entry.

```
\newcommand*\glsxtrdeffield}[2]{\csdef{glo@\glsdetoklabel{#1}@#2}}
```

\glsxtredeffield Just use \csedef to provide a field value for the given entry.

```
\newcommand*\glsxtredeffield}[2]{\protected@csedef{glo@\glsdetoklabel{#1}@#2}}
```

`\glxtrapptocsvfield` Similar to the above but will append value with a leading comma if the field is already defined. This is used by `bib2gls`. There's no check if the entry has been defined. (Because of the way that `bib2gls`'s `save-from-alias` etc options are implemented, the entry may not have yet been written to the `glstex` file when this command is used.)

```
\newcommand*\glxtrapptocsvfield}[3]{%
\ifcsdef{glo@\glsdetoklabel{#1}@#2}%
{\csappto{glo@\glsdetoklabel{#1}@#2}{, #3}}%
{\csdef{glo@\glsdetoklabel{#1}@#2}{#3}}%
}
```

`\glxtrsetfieldifexists`

```
\newcommand*\glxtrsetfieldifexists}[3]{\glsoifexists{#1}{#3}}
```

`\GlsXtrSetField` Allow the user to set a field. First argument entry label, second argument field label, third argument value.

```
\newrobustcmd*\GlsXtrSetField}[3]{%
\glxtrsetfieldifexists{#1}{#2}%
{\csdef{glo@\glsdetoklabel{#1}@#2}{#3}}%
}
```

`\GlsXtrLetField` Uses `\cslet` instead. Third argument should be a macro.

```
\newrobustcmd*\GlsXtrLetField}[3]{%
\glxtrsetfieldifexists{#1}{#2}%
{\cslet{glo@\glsdetoklabel{#1}@#2}{#3}}%
}
```

`\csGlsXtrLetField` Uses `\csletcs` instead. Third argument should be a control sequence name.

```
\newrobustcmd*\csGlsXtrLetField}[3]{%
\glxtrsetfieldifexists{#1}{#2}%
{\csletcs{glo@\glsdetoklabel{#1}@#2}{#3}}%
}
```

`\GlsXtrLetFieldToField` Sets the field for one entry to the field for another entry. Third argument should be the other entry and the fourth argument that other field label.

```

}

```

`\preglossary preamble` Typo in command name resulted in `\preglossary preamble` being defined when it should have been called `\pretoglossary preamble`. Old name retained for backward compatibility.

```
\newcommand{\preglossary preamble}{\pretoglossary preamble}
```

1.3 Modifications to Commands Provided by glossaries

Some of the commands provided by `glossaries` are modified to take into account new options or to change default behaviour.

`\@p@glossary section` Phantom section only needs to be added for starred section commands.

```

\renewcommand*{\@p@glossary section}[2]{%
\gls clearpage
\ifdefempty{\@glossary sec star}
{%
\csname\@glossary sec\endcsname{#2}%
}%
{%
\phantomsection
\@gls@toc{#1}{\@glossary sec}%
\csname\@glossary sec\endcsname*{#2}%
}%
\@glossary sec label
}

```

The original `\@gls@entry@field` causes a problem for undefined entries when used in section headings or captions. Since entries must be defined with just the base package this isn't a significant issue, but it will cause a problem with `bib2gls` where no entries are defined on the first `LATEX` call, so redefine `\@gls@entry@field` to use `\csuse` instead of `\csname`.

```
\@gls@entry@field{<label>}{<field>}
```

`\@gls@entry@field`

This command was introduced to `glossaries` version 4.03 but older versions are likely to be incompatible with `glossaries-extra`.

```

\ifdef\@gls@entry@field
{

```

```

\renewcommand*{\@gls@entry@field}[2]{\csuse{glo@\glsdetoklabel{#1}@#2}}
}
{}

```

```

\ifglsused{<label>}{<true part>}{<false part>}

```

\ifglsused

In the event that undefined entries should trigger a warning rather than an error, \ifglsused needs to be modified to check for existence. If the boolean variable is undefined, then its state is indeterminate and is neither true nor false, so neither *<true part>* nor *<false part>* will be performed if *<label>* is undefined. See also \GlsXtrIfUnusedOrUndefined.

```

\renewcommand*{\ifglsused}[3]{%
  \glsdoifexists{#1}{\ifbool{glo@\glsdetoklabel{#1}@flag}{#2}{#3}}%
}

1.3.1 Existence Checks

`\glsdoifexists` Modify `\glsdoifexists` to take account of the undefaction setting.

```
\renewcommand{\glsdoifexists}[2]{%
  \ifglentryexists{#1}{#2}{\glxtr@doifexists{#1}}%
}
```

`\glxtr@doifexists` Provide a robust command for the error/warning in case `\glsdoifexists` is expanded.

```
\newrobustcmd{\glxtr@doifexists}[1]{%
Define \glslabel in case it’s needed after this command (for example in the
post-link hook).
\protected@edef\glslabel{\glsdetoklabel{#1}}%
\expandafter\glxtrundefdebug\expandafter
  {\expandafter\detokenize\expandafter{\glslabel}}%
\glxtrundefaction{Glossary entry ‘\glslabel’
has not been defined}{You need to define a glossary entry before
you can reference it.}%
}
```

`\glsdoifnoexists` Modify `\glsdoifnoexists` to take account of the undefaction setting.

```
\renewcommand{\glsdoifnoexists}[2]{%
  \ifglentryexists{#1}{\glxtr@doifnoexists{#1}}{#2}%
}
```

`\glxtr@doifnoexists` Provide a robust command for the error/warning in case `\glsdoifnoexists` is expanded.

```
\newrobustcmd{\glxtr@doifnoexists}[1]{%
  \glxtrundefaction{Glossary entry ‘\glsdetoklabel{#1}’
has already been defined}%
}
```

`\glsdoifexistsordo` Modify `\glsdoifexistsordo` to take account of the undefaction setting. This command was introduced in glossaries version 4.19, so check if it has been defined first.

```

\ifdef\glsdoifexistsordo
{%
  \renewcommand{\glsdoifexistsordo}[3]{%
    \ifglsentryexists{#1}{#2}%
    {%
      \glstrundefaction{Glossary entry ‘\glsdetoklabel{#1}’
        has not been defined}{You need to define a glossary entry
        before you can use it.}%
      #3%
    }%
  }%
}
{%
  \glsxtr@warnonexistsordo\glsdoifexistsordo
  \newcommand{\glsdoifexistsordo}[3]{%
    \ifglsentryexists{#1}{#2}%
    {%
      \glstrundefaction{Glossary entry ‘\glsdetoklabel{#1}’

      #3%
    }%
    {#2}%
  }%
}

```

```
}%
}
```

There are now three types of cross-references: the `see` key (as original), the `alias` key (from `glossaries-extra` v1.12) and the `seealso` key (from `glossaries-extra` v1.16). The original `see` key needs to have a corresponding field (which it doesn't with the base `glossaries` package).

`\@newglossaryentryposthook` Hook into end of `\newglossaryentry` to add “see” value as a field.

```
\appto\@newglossaryentryposthook{%
  \ifdefvoid\@glo@see
    {\csxdef{glo@\@glo@label @see}{}}%
  {%
    \csxdef{glo@\@glo@label @see}{\@glo@see}%
    \if@glxtr@autoseeindex
      \@glxtr@autoindexcrossrefs
    \fi
  }%
}
\appto\@gls@keymap{, {see}{see}}
```

```
\glxtrseelistsencap{<content>}
```

`\glxtrseelistsencap`

Encapsulates cross-reference list.

```
\newcommand*{\glxtrseelistsencap}[1]{\space #1}
```

`\glxtrseelistsdelim` Delimiter in cross-reference list.

```
\newcommand*{\glxtrseelistsdelim}{, }
```

```
\glxtrseelists{<label>}
```

`\glxtrseelists`

```
\newcommand*{\glxtrseelists}[1]{%

```

`\@glxtr@useesee`

```

\def\@glxtr@useesee[#1]#2\end@glxtr@useesee{%
  \glxtruseeseeformat{#1}{#2}%
}

```

`\glxtruseeseeformat` The format used by `\glxtruseesee`. The first argument is the tag (such as `\seename`). The second argument is the comma-separated list of cross-referenced labels.

```

\newcommand*\glxtruseeseeformat}[2]{%
  \glseeformat{#1}{#2}{}%
}

```

`\glseeitemformat` glossaries originally defined `\glseeitemformat` to use `\glseentryname` but in v3.0 this was switched to use `\glseentrytext` due to problems occurring with the `name` field being sanitized. Since this is no longer a problem, `glossaries-extra` restored the original definition as it makes more sense to use the `name` in the cross-reference list. Unfortunately this doesn't take style changes into account, so as from v1.42, this now uses `\glsfmtext` and `\glsfmname` instead. (The `text` field is chosen rather than the `short` field to allow for the “noshort” styles.)

```

\renewcommand*\glseeitemformat}[1]{%
  \ifglshasshort{#1}{\glsfmtext{#1}}{\glsfmname{#1}}%
}

```

```
\glxtrhiername{<label>}
```

`\glxtrhiername`

Displays the hierarchical name for the given entry. The cross-reference format `\glseeitemformat` may be redefined to use this command to show the hierarchy, if required. This now uses `\glsfmtext` and `\glsfmname` instead of `\glsaccessshort` and `\glsaccessname` to allow for style formatting.

```

1.3.3 Existing Glossary Style Modifications

Modify \setglossarystyle to keep track of the current style. This allows the \glossaries-extra-stylemods package to reset the current style after the required modifications have been made.

`\@glxtr@current@style` Initialise the current style to the default style.

```
\newcommand*\@glxtr@current@style{\@glossary@default@style}
```

`\glxtrpreglossarystyle` A hook to initialise default definitions for style commands.

```
\newcommand{\glxtrpreglossarystyle}{%
  \renewcommand*\glssubgroupheading[4]{\glsgroupheading{##4}}%
}
```

Modify `\setglossarystyle` to set `\@glxtr@current@style` and reset `\glssubgroupheading` in case the style doesn't support it.

`\setglossarystyle`

```
\renewcommand*\setglossarystyle[1]{%
  \ifcsundef{@glsstyle@#1}%
  {%
    \PackageError{glossaries-extra}{Glossary style '#1' undefined}{}%
  }%
  {%
    \glxtrpreglossarystyle
    \csname @glsstyle@#1\endcsname
  }
```

Only set the current style if it exists.

```
\protected@edef\@glxtr@current@style{#1}%
}%
```

Set this as the default, if a default hasn't been set.

```
\ifx\@glossary@default@style\relax
  \protected@edef\@glossary@default@style{#1}%
\fi
}
```

In case we have an old version of `glossaries`:

```
\ifdef\@glossary@default@style
{}
{%
  \let\@glossary@default@style\relax
}
```

`\glslistdottedwidth` If `\glslistdottedwidth` has been defined and is currently equal to `.5\hsize` then make the modification suggested in [bug report #92](#)

```
\ifdef\glslistdottedwidth
{%
  \ifdim\glslistdottedwidth=.5\hsize
    \setlength{\glslistdottedwidth}{-\dimexpr\maxdimen-1sp\relax}
  \AtBeginDocument{%
    \ifdim\glslistdottedwidth=-\dimexpr\maxdimen-1sp\relax
      \setlength{\glslistdottedwidth}{.5\columnwidth}%
    \fi
  }%
\fi
```

```
}  
{}%
```

Similarly for `\glsdescwidth`:

```
\glsdescwidth  
\ifdef\glsdescwidth  
{%  
  \ifdim\glsdescwidth=.6\hsize  
    \setlength{\glsdescwidth}{-\dimexpr\maxdimen-1sp\relax}  
    \AtBeginDocument{%  
      \ifdim\glsdescwidth=-\dimexpr\maxdimen-1sp\relax  
        \setlength{\glsdescwidth}{.6\columnwidth}%  
      \fi  
    }%  
  \fi  
}  
{}%
```

and for `\glspagelistwidth`:

```
\glspagelistwidth  
\ifdef\glspagelistwidth  
{%  
  \ifdim\glspagelistwidth=.1\hsize  
    \setlength{\glspagelistwidth}{-\dimexpr\maxdimen-1sp\relax}  
    \AtBeginDocument{%  
      \ifdim\glspagelistwidth=-\dimexpr\maxdimen-1sp\relax  
        \setlength{\glspagelistwidth}{.1\columnwidth}%  
      \fi  
    }%  
  \fi  
}  
{}%
```

`\glossaryentrynumbers` Has the `nonumberlist` option been used?

```
\def\org@glossaryentrynumbers#1{#1\gls@save@numberlist{#1}}%  
\ifx\org@glossaryentrynumbers\glossaryentrynumbers  
  \glsnonumberlistfalse  
  \renewcommand*{\glossaryentrynumbers}[1]{%  
    \ifglsentryexists{\glscurrententrylabel}%  
    {%  
      \@glsxtrpreloctag  
      \GlsXtrFormatLocationList{#1}%  
      \@glsxtrpostloctag  
      \gls@save@numberlist{#1}%  
    }{}%  
  }%  
\else  
  \glsnonumberlisttrue
```

```

\renewcommand*\glossaryentrynumbers}[1]{%
  \ifglsentryexists{\glscurrententrylabel}%
  {%
    \gls@save@numberlist{#1}%
  }{}%
}%
\fi

```

`\GlsXtrFormatLocationList` Provide an easy interface to change the format of the location list without removing the save number list stuff.

```

\newcommand*\GlsXtrFormatLocationList}[1]{#1}

```

Sometimes users want to prefix the location list with “page”/“pages”. The simplest way to determine if the location list consists of a single location is to check for instances of `\delimN` or `\delimR`, but this isn’t so easy to do as they might be embedded inside the argument of formatting commands. With a bit of trickery we can find out by adjusting `\delimN` and `\delimR` to set a flag and then save information to the auxiliary file for the next run.

`\GlsXtrEnablePreLocationTag`

```

\newcommand*\GlsXtrEnablePreLocationTag}[2]{%
  \let\@glsxtrpreloctag\@glsxtrpreloctag
  \let\@glsxtrpostloctag\@glsxtrpostloctag
  \renewcommand*\@glsxtr@pagetag}{#1}%
  \renewcommand*\@glsxtr@pagetag}{#2}%
  \renewcommand*\@glsxtr@savepreloctag}[2]{%
    \csgdef{\@glsxtr@preloctag@##1}{##2}%
  }%
  \renewcommand*\@glsxtr@doloctag}{%
    \ifcsundef{\@glsxtr@preloctag@\glscurrententrylabel}%
    {%
      \GlossariesWarning{Missing pre-location tag for ‘\glscurrententrylabel’.
        Rerun required}%
    }%
    {%
      \csuse{\@glsxtr@preloctag@\glscurrententrylabel}%
    }%
  }%
}
\@onlypreamble\GlsXtrEnablePreLocationTag

```

`\@glsxtrpreloctag`

```

\def\glossaryentrynumbers##1{\gls@save@numberlist{##1}}%
\else
\def\glossaryentrynumbers##1{%
  \@glsxtrpreloctag
  \GlsXtrFormatLocationList{##1}%
  \@glsxtrpostloctag
  \gls@save@numberlist{##1}}%
\fi
}%
}

```

1.3.4 Entry Formatting, Hyperlinks and Indexing

`\glsentryfmt` Change default entry format. Use the generic format for regular terms (that is, entries that have a category with the `regular` attribute set) or non-regular terms without a short value and use the abbreviation format for non-regular terms that have a short value. If further attributes need to be checked, then `\glsentryfmt` will need redefining as appropriate (or use `\defglsentryfmt`). The abbreviation format is set here for entries that have a short form, even if they are regular entries to ensure the abbreviation fonts are correct.

```

\renewcommand*\glsentryfmt{%
  \ifglshasshort{\glslabel}{\glssetabbrvfmt{\glscategory{\glslabel}}}{}%
  \glsifregular{\glslabel}%
  {\glsxtrregularfont{\glsgenentryfmt}}%
  {%
    \ifglshasshort{\glslabel}%
    {\glsxtrabbreviationfont{\glsxtrgenabbrvfmt}}%
    {\glsxtrregularfont{\glsgenentryfmt}}%
  }%
}

```

`\glsxtrregularfont` Font used for regular entries.

```
\newcommand*\glsxtrregularfont}[1]{#1}
```

`\glsxtrabbreviationfont` Font used for abbreviation entries.

```
\newcommand*\glsxtrabbreviationfont}[1]{#1}
```

Some formatting commands (such as highlighting or letter spacing) may require expandable content in the argument, so also provide a formatting command for use within `\glsgenentryfmt` for those instances.

`\glsxtrdefaultentrytextfmt` This is the default command that `\glsxtrgenentrytextfmt` is initialised to within `\@gls@link`.

```
\newcommand{\glsxtrdefaultentrytextfmt}[1]{#1}
```

`\glsxtrattentrytextfmt` Provide a convenient command that applies the formatting according to the category attribute. This isn't used by default as this inner formatting should rarely be needed and increases complexity.

```

\newcommand{\glxtrattrentrytextfmt}[1]{%
  \glshasattribute{\glslabel}{innertextformat}%
  {%
    \csuse{\glsgetattribute{\glslabel}{innertextformat}}{#1}%
  }%
  {#1}%
}

```

`\glxtrgenentrytextfmt` This command is a user-level command to allow it to be included in custom formats or styles but it should not be redefined at the user level as it's redefined within `\@gls@link` (similar to other style commands, such as `\gls@scaps`). Redefine `\glxtrdefaultentrytextfmt` to change the default definition for this command.

```

\newcommand*{\glxtrgenentrytextfmt}{\glxtrdefaultentrytextfmt}

```

`\glsfmtfield`

```

\glsfmtfield{<insert>}{<cs>}{<label>}{<field>}

```

Provide a convenient way of applying a formatting command to the actual field contents. No check for existence.

Note this command intentionally isn't robust, as it's possible that a user may want to redefine an abbreviation command to use `\MakeLowercase`, for example, to use smallcaps when abbreviations have been defined with the short version in capitals. Using `\newrobustcmd` will break that case.

```

\newcommand*{\glsfmtfield}[4]{%
  \expandafter\expandafter\expandafter
  #2\expandafter\expandafter\expandafter
  {\csname glo@glsdetoklabel{#3}@#4\endcsname #1}%
}

```

`\Glsfmtfield`

```

\Glsfmtfield{<insert>}{<cs>}{<label>}{<field>}

```

As above but convert first letter to uppercase. Note that if the formatting command can go outside of `\makefirststuc` then it can simply be applied around the appropriate command that expands to the field value. For example,

```

%\emph{\Glsentrytext{label}}
%
```

instead of

```

%\Glsfmtfield{}{\emph}{sample}{text}
%
```

Note this command intentionally isn't robust for the same reason as above. The expansion allows `\makefirststuc` to pick up any mappings or blockers before the content is passed to `\MFUsentencecase`.

```

\newcommand*\Glsfmtfield}[4]{%
  \ifx#2\@firstofone
    \expandafter\expandafter\expandafter
    \glsentencecase\expandafter\expandafter\expandafter
    {%
      \csname glo@glsdetoklabel{#3}@#4\endcsname #1%
    }%
  \else
    \expandafter\expandafter\expandafter
    \glsentencecase\expandafter\expandafter\expandafter
    {%
      \expandafter\expandafter\expandafter
      #2\expandafter\expandafter\expandafter
      {\csname glo@glsdetoklabel{#3}@#4\endcsname #1}%
    }%
  \fi
}
\glsmfuaddmap{\glsfmtfield}{\Glsfmtfield}

```

`\Glsfmtfield{<insert>}{<cs>}{<label>}{<field>}`

`\Glsfmtfield`

As above but convert all to uppercase. The expansion is in case we have an older kernel.

```

\newcommand*\Glsfmtfield}[4]{%
  \ifx#2\@firstofone
    \expandafter\expandafter\expandafter
    \glsuppercase\expandafter\expandafter\expandafter
    {%
      \csname glo@glsdetoklabel{#3}@#4\endcsname #1%
    }%
  \else
    \expandafter\expandafter\expandafter
    \glsuppercase\expandafter\expandafter\expandafter
    {%
      \expandafter\expandafter\expandafter
      #2\expandafter\expandafter\expandafter
      {\csname glo@glsdetoklabel{#3}@#4\endcsname #1}%
    }%
  \fi
}
\glsmfublocker{\Glsfmtfield}

```

`\glsfmtinsert` Formats `\glsinsert`.

```

\newcommand*\glsfmtinsert){%
  \ifdefempty\glsinsert){%
    {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsinsert}}%
  }
}

```

`\GLSfmtinsert` As above but all caps.

```
\newcommand*\GLSfmtinsert}{%
  \ifdefempty\glsinsert}{%
    {%
      \expandafter\glsuppercase\expandafter
      {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsinsert}}%
    }%
  }
```

```
\glsifapplyinnerfmtfield{<label>}{<field>}{<true>}{<false>}
```

`\glsifapplyinnerfmtfield`

Does *<true>* if `\glsxtrgenentryfmt` should encapsulate the given field with the inner format otherwise does *<false>*.

```
\newcommand*\glsifapplyinnerfmtfield}[4]{%
  \ifcsundef{@glo@\glsdetoklabel{#1}@innerfmt@fields}%
    {#3}%
  {\xifinlistcs{#2}{@glo@\glsdetoklabel{#1}@innerfmt@fields}{#4}{#3}}%
}
```

`\glsexclapplyinnerfmtfield` Adds the field to the exclusion list. This typically means that the field value already contains the inner formatting.

```
\newcommand*\glsexclapplyinnerfmtfield}[2]{%
  \listcseadd{@glo@\glsdetoklabel{#1}@innerfmt@fields}{#2}%
}
```

`\glsxtrgenentryfmt` Redefine to use `\glsxtrgenentrytextfmt`

```

Commands like `\glsifplural` are only used by the `\gls`-like commands in the `glossaries` package, but it might be useful for the post-link hook to know if the user has used, say, `\glsfirst` or `\glsplural`. This can provide better consistency with the formatting of the `\gls`-like commands, even though they don't use `\glsentryfmt`.

`\glxtrifwasglslike` For use in the post-link hook, this indicates whether or not the hook follows a `\gls-like` command.

```
\newcommand*\glxtrifwasglslike}[2]{#2}
```

`\glxtrifwasglslikeandfirstuse`

```
\newcommand*\glxtrifwasglslikeandfirstuse}[2]{%
\glxtrifwasglslike
{%
\glxtrifwasfirstuse{#1}{#2}%
}#2}%
}
```

`\glxtrifwassubsequentuse`

```
\newcommand*\glxtrifwassubsequentuse}[2]{%
\glxtrifwasglslike
{%
\glxtrifwasfirstuse{#2}{#1}%
}#2}%
}
```

`\glxtrifallcaps` Shortcut.

```
\newcommand*\glxtrifallcaps}[2]{\glscapscase{#2}{#1}{#1}}
```

`\glxtrcurrentfield` Another placeholder to find out information about the calling command. This will be empty for the `\gls` and `\glxtrfull` set of commands and will be the singular field otherwise.

```
\newcommand*\glxtrcurrentfield{}
```

`\glxtr@shortfieldname`

```
\newcommand*\glxtr@shortfieldname}{short}
```

`\glxtrifwassubsequentorshort`

```
\newcommand*\glxtrifwassubsequentorshort}[2]{%
\glxtrifwasglslike
{%
\glxtrifwasfirstuse{#2}{#1}%
}%
{\ifdefequal\glxtrcurrentfield\glxtr@shortfieldname{#1}{#2}}%
}
```

`\@gls@field@link` Redefine `\@gls@field@link` so that commands like `\glsfirst` can setup `\glxtrifwasfirstuse` etc to allow the postlink hook to work better. This now has an optional argument that sets up the defaults.

```
\renewcommand{\@gls@field@link}[4][]{%

```

If the record option has been used, the information needs to be written to the aux file regardless of whether the entry exists (unless indexing has been switched off).

```

```

```
\glxtrsaveinsert{<entry-label>}{<insert>}
```

`\glxtrsaveinsert`

The insert argument isn't saved in `\glsinsert` for the `\glslike` commands, but provide a way to save it if it is required for the post-link hook. The default is to set `\glsinsert` to empty. This means that the insert won't appear in the post-link hook with commands like `\glxtrfull` for the hyphen abbreviation styles. The entry label is provided in case the insert should only be saved for certain entries, such as those with a particular category.

```
\newcommand*{\glxtrsaveinsert}[2]{\def\glsinsert{}}
```

`\glxtrfullsaveinsert` As above but specifically for commands like `\glxtrfull`

```
\newcommand*{\glxtrfullsaveinsert}{\glxtrsaveinsert}
```

Commands like `\acrshort` already set `\glsifplural`, but they don't set `\glsxtrifwasfirstuse` so they need adjusting. These commands shouldn't be used with `\newabbreviation`, but the redefinitions below allow for users reverting `\newacronym` back to its base definition.

\@@glsxtr@base@acrcmd@warn Warn user that they need to use to new abbreviation commands.

```

\newcommand*{\@@glsxtr@base@acrcmd@warn}[2]{%
  \GlossariesExtraWarning{Base acronym command \string#1\space
    should not be used with new abbreviation definitions. Use
    \string#2\space instead}%
}

```

\@glsxtr@base@acrcmd Warn user that they need to use to new abbreviation commands.

```

\let\@glsxtr@base@acrcmd\@@glsxtr@base@acrcmd@warn

```

The following `acr` commands don't support `innertextformat`.

  \glspostlinkhook
}
```

The full formats use the internal long and short commands (such as `\@acrshort` and `\@acrlong`). Therefore they don't need adjustments, but they do need clearer warnings. This means three warnings per use (once for the full command and once each for the short and long commands), but at least this way the most important warning (replace `\acrfull` with `\glxtrfull` etc) is present.

`\@acrfull`

```
\def\@acrfull#1#2[#3]{%
```

```

\def\glsxtrcurrentfield{%
\glsxtr@base@acrcmd\acrfull\glsxtrfull
\acrfullfmt{#1}{#2}{#3}%
}

\@Acrfull
\def\@Acrfull#1#2[#3]{%
\def\glsxtrcurrentfield{%

\@ACRfullpl
\def\@ACRfullpl#1#2[#3]{%
\def\glsxtrcurrentfield{%
\glsxtr@base@acrcmd\ACRfullpl\GLSxtrfullpl
\ACRfullplfmt{#1}{#2}{#3}%
}

```

Modify \@glsaddkey so additional keys provided by the user can be treated in a similar way.

```

\@glsaddkey
\renewcommand*{\@glsaddkey}[7]{%
\key@ifundefined{glossentry}{#1}%
{%
\define@key{glossentry}{#1}{\csdef{@glo@#1}{##1}}%
\appto\@gls@keymap{,#1}{#1}}%

```

```

\appto\@newglossaryentryprehook{\csdef{@glo@#1}{#2}}%
\appto\@newglossaryentryposthook{%
  \letcs{@glo@tmp}{@glo@#1}%
  \gls@assign@field{#2}{\@glo@label}{#1}{\@glo@tmp}%
}%
\newcommand*{#3}[1]{\@gls@entry@field{##1}{#1}}%
\newcommand*{#4}[1]{\@Gls@entry@field{##1}{#1}}%

```

Now for the commands with links. These currently don't support the inner text format. First the version with no case change:

```

\ifcsdef{@gls@user@#1@}%
{%
  \PackageError{glossaries}%
  {Can't define '\string#5' as helper command
   '\expandafter\string\csname @gls@user@#1@\endcsname' already
   exists}%
  {}%
}%
{%
\expandafter\newcommand\expandafter*\expandafter
  {\csname @gls@user@#1@\endcsname}[2][]{%
    \new@ifnextchar[%
      {\csuse{@gls@user@#1@}{##1}{##2}}%
      {\csuse{@gls@user@#1@}{##1}{##2}[]}}%
\csdef{@gls@user@#1@}##1##2[##3]{%
  \def\glsxtrcurrentfield{#1}%
  \glsxtrassignfieldfont{##2}%
  \glsxtrsaveinsert{##2}{##3}%
  \@gls@field@link{##1}{##2}{\@gls@field@font{#3{##2}##3}}%
}%
\newrobustcmd*{#5}{%
  \expandafter\@gls@hyp@opt\csname @gls@user@#1@\endcsname}%
}%

```

Next the version with the first letter converted to upper case (modified):

```

\ifcsdef{@Gls@user@#1@}%
{%
  \PackageError{glossaries}%
  {Can't define '\string#6' as helper command
   '\expandafter\string\csname @Gls@user@#1@\endcsname' already
   exists}%
  {}%
}%
{%
\expandafter\newcommand\expandafter*\expandafter
  {\csname @Gls@user@#1@\endcsname}[2][]{%
    \new@ifnextchar[%
      {\csuse{@Gls@user@#1@}{##1}{##2}}%
      {\csuse{@Gls@user@#1@}{##1}{##2}[]}}%
\csdef{@Gls@user@#1@}##1##2[##3]{%
  \def\glsxtrcurrentfield{#1}%

```

```

\glstrassignfieldfont{##2}%
\glstrsaveinsert{##2}{##3}%
\@gls@field@link[\let\glscapscase\@secondofthree]%
{##1}{##2}{\@gls@field@font{#4{##2}##3}}%
}%
\newrobustcmd*{#6}{%
\expandafter\@gls@hyp@opt\csname @Gls@user@#1\endcsname}%
}%

```

Finally the all caps version (modified):

```

\ifcsdef{@Gls@user@#1@}%
{%
\PackageError{glossaries}%
{Can't define '\string#7' as helper command
'\expandafter\string\csname @Gls@user@#1@\endcsname' already
exists}%
{}}%
}%
{%
\expandafter\newcommand\expandafter*\expandafter
{\csname @Gls@user@#1\endcsname}[2][ ]{%
\new@ifnextchar[%
{\csuse{@Gls@user@#1@}{##1}{##2}}%
{\csuse{@Gls@user@#1@}{##1}{##2}[ ]}}%
\csdef{@Gls@user@#1@}##1##2[##3]{%
\def\glstrcurrentfield{#1}%
\glstrassignfieldfont{##2}%
\glstrsaveinsert{##2}{##3}%
\@gls@field@link[\let\glscapscase\@thirdofthree]%
{##1}{##2}{\@gls@field@font{\glssupercase{#3{##2}##3}}}%
}%
\newrobustcmd*{#7}{%
\expandafter\@gls@hyp@opt\csname @Gls@user@#1\endcsname}%
}%

```

Add mappings.

```

\glsmfuaddmap{#3}{#4}%
\glsmfuaddmap{#5}{#6}%
\glsmfublocker{#7}%
}%
{%
\PackageError{glossaries-extra}{Key '#1' already exists}{}%
}%
}

```

`\@gls@link@nocheckfirsthyper` Old versions of `glossaries` don't define this, so provide it just in case it hasn't been defined.

```
\providecommand*{\@gls@link@nocheckfirsthyper}{}
```

`\@gls@link@postkeys@checkfirsthyper` Need another check after `preunset` and `postunset` options have been applied.

```
\newcommand*{\@gls@link@postkeys@checkfirsthyper}{}
```

`\@gls@link@checkfirsthyper` Modify check to determine if the hyperlink should be automatically suppressed, but save the original in case the acronyms are restored.

```
\let\@glsxtr@org@checkfirsthyper\@gls@link@checkfirsthyper
\renewcommand*\@gls@link@checkfirsthyper}{%
```

`\ifglsused` isn't useful in the post link hook as it's already been unset by then, so define a command that can be used in the post link hook. Since `\@gls@link@checkfirsthyper` is only used by commands like `\gls` but not by other commands, this seems the best place to put it to automatically set the value for the commands that change the first use flag. The other commands should set `\glsxtrifwasfirstuse` to `\@secondoftwo` (which is done in `\@glsxtr@field@linkdefs`). Note that if the entry is undefined (as with `bib2gls` on the first L^AT_EX run), `\ifglsused` does neither true nor false parts. However, in that case, this macro won't be called anyway (since it's used in the argument of `\glsdoifexistsordo`).

```
\ifglsused{\glslabel}%
{\let\glsxtrifwasfirstuse\@secondoftwo}
{\let\glsxtrifwasfirstuse\@firstoftwo}%
```

Similarly for `\glsxtrifwasglslike`

```
\let\glsxtrifwasglslike\@firstoftwo
```

Store the category label for convenience.

```
\protected@edef\glscategorylabel{\glscategory{\glslabel}}%
\glsxtrifwasfirstuse
{%
\glsifcategoryattribute{\glscategorylabel}{nohyperfirst}{true}%
{\KV@glslink@hyperfalse}{}%
}%
{%
\glsifcategoryattribute{\glscategorylabel}{nohypernext}{true}%
{\KV@glslink@hyperfalse}{}%
}%
\glslinkcheckfirsthyperhook
}
```

`\do@glsdisablehyperinlist` This command was introduced in glossaries v4.19. If it hasn't been defined, we're using an earlier version, in which case the `nohyper` attribute can't be implemented.

```
\ifdef\do@glsdisablehyperinlist
{%
\let\@glsxtr@do@glsdisablehyperinlist\do@glsdisablehyperinlist
\renewcommand*\do@glsdisablehyperinlist}{%
\@glsxtr@do@glsdisablehyperinlist
\glsifattribute{\glslabel}{nohyper}{true}{\KV@glslink@hyperfalse}{}%
}
}
{}
```

Define a noindex key to prevent writing information to the external file.

```
\define@boolkey{glslink}{noindex}[true]{}  
\KV@glslink@noindexfalse
```

`\@gls@save@glslocal` Defined in glossaries v4.50 so may not be defined.

```
\providecommand*{\@gls@save@glslocal}{%  
  \let\if@org@KV@glslink@local\ifKV@glslink@local  
}
```

`\@gls@restore@glslocal` Defined in glossaries v4.50 so may not be defined.

```
\providecommand*{\@gls@restore@glslocal}{%  
  \ifKV@glslink@local  
    \let\@gls@do@glsunset@glslocalunset  
  \else  
    \let\@gls@do@glsunset@glsunset  
  \fi  
  \let\ifKV@glslink@local\if@org@KV@glslink@local  
}
```

`\@gls@default@restore@glslocal` Save default definition of `\@gls@restore@glslocal`

```
\let\@gls@default@restore@glslocal\@gls@restore@glslocal
```

`\@gls@ignore@restore@glslocal`

```
\newcommand*{\@gls@ignore@restore@glslocal}{%  
  \let\@gls@do@glsunset@gobble  
  \let\ifKV@glslink@local\if@org@KV@glslink@local  
}
```

`\@gls@do@glsunset` Defined in glossaries v4.50 so may not be defined.

```
\providecommand*{\@gls@do@glsunset}[1]{\glsunset{#1}}
```

`\@gls@default@glslink@opts` The noindex setting needs to be initialised, so it's now always set to false first before applying the default options. Otherwise, if noindex is explicitly set in a command like `\gls` then it won't get reset if the default option list doesn't set it.

```
\newcommand*{\@gls@default@glslink@opts}{}
```

If `\@gls@setdefault@glslink@opts` has been defined (glossaries v4.20) use it to set the default keys in `\@glslink`.

`\@gls@setdefault@glslink@opts`

```
\ifdef\@gls@setdefault@glslink@opts  
{  
  \renewcommand*{\@gls@setdefault@glslink@opts}{%  
    \KV@glslink@noindexfalse  
    \expandafter\setupglslink\expandafter{\@gls@default@glslink@opts}%  
    \glsxtrsetaliasnoindex  
  }  
}
```

Not defined so prepend it to `\do@gl:disablehyperinlist` to achieve the same effect.

```
\newcommand*{\@gls@setdefault@glslink@opts}{%
  \KV@glslink@noindexfalse
  \expandafter\setupglslink\expandafter{\@gls@default@glslink@opts}%
  \@glstrsetaliasnoindex
}
\preto\do@gl:disablehyperinlist{\@gls@setdefault@glslink@opts}
}
```

`\glstrsetaliasnoindex` Allow user to hook into the alias noindex setting. Default behaviour switches off indexing for aliases. If the record option is on, this will have been defined to do nothing. (bib2gls will deal with records for aliased entries.)

```
\providecommand*{\glstrsetaliasnoindex}{%
  \KV@glslink@noindextrue
}
```

`\@glstrsetaliasnoindex` The change made in v1.46 to remove the grouping has had the knock-on effect of redefining `\glscurrentfieldvalue`, which may be a problem, so v1.47 has changed this to use `\ifcsvoid`.

```
\newcommand*{\@glstrsetaliasnoindex}{%
  \ifcsvoid{glo@gl:sdetoklabel{\glslabel}@alias}%
  {}%
  {%
    \let\glstrindexaliased\@glstrindexaliased
    \glstrsetaliasnoindex
    \let\glstrindexaliased\@no@glstrindexaliased
  }%
}
```

`\@glstrindexaliased`

```
\newcommand{\@glstrindexaliased}{%
  \ifKV@glslink@noindex
  \else
    \begingroup
    \let\@glsnumberformat\@glstr@defaultnumberformat

    \protected@edef\@gls@counter{\csname glo@gl:sdetoklabel{\glslabel}@counter\endcsname}%
    \glstr@saveentrycounter
    \glstr@wrglossary@encap{\glstralias{\glslabel}}{\@do@wrglossary{\glstralias{\glslabel}}}%
    \endgroup
  \fi
}
```

`\@no@glstrindexaliased`

```
\newcommand{\@no@glstrindexaliased}{%
  \PackageError{glossaries-extra}{\string\glstrindexaliased\space
  not permitted outside definition of \string\glstrsetaliasnoindex}%
  {}%
}
```

`\glxtrindexaliased` Provide a command to redirect alias indexing, but only allow it to be used within `\glxtrsetaliasnoindex`.

```
\let\glxtrindexaliased\@no@glxtrindexaliased
```

`\GlsXtrSetDefaultGlsOpts` Set the default options for `\glslink` etc.

```
\newcommand*\GlsXtrSetDefaultGlsOpts}[1]{%
  \renewcommand*\@gls@default@glslink@opts{#1}%
}
```

`\GlsXtrAppToDefaultGlsOpts`

```
\newcommand*\GlsXtrAppToDefaultGlsOpts}[1]{%
  \appto\@gls@default@glslink@opts{,#1}%
}
```

`\GlsXtrPreToDefaultGlsOpts`

```
\newcommand*\GlsXtrPreToDefaultGlsOpts}[1]{%
  \preto\@gls@default@glslink@opts{#1,}%
}
```

`\glxtrifindexing` Provide user level command to access it in `\glswriteentry`.

```
\newcommand*\glxtrifindexing}[2]{%
  \ifKV@glslink@noindex #2\else #1\fi
}
```

```
\glxtr@wrglossary@encap{<label>}{<whatsit>}
```

`\glxtr@wrglossary@encap`

Encapsulate indexing `whatsit` and increment indexed count. See also `\glxtrdowrglossaryhook`

```
\newcommand*\glxtr@wrglossary@encap}[2]{\glsencapwrcontent{#2\@glxtr@inc@indexcount{#1}}}
```

Keep track of how many times an entry has been indexed. This doesn't test if the entry has been defined to allow for the first L^AT_EX run before calling `bib2gls`.

`\@glxtr@inc@indexcount`

```
\newcommand*\@glxtr@inc@indexcount}[1]{%
  \ifcsdef{glo@\glsdetoklabel{#1}@indexed}
  {%
    \csxdef{glo@\glsdetoklabel{#1}@indexed}{%
      \expandafter\number\expandafter\numexpr\csname glo@\glsdetoklabel{#1}@indexed\endcsname+1}%
    }%
  }%
  \csgdef{glo@\glsdetoklabel{#1}@indexed}{1}%
}
```

`\glsentryindexcount`

```
\newcommand*\glsentryindexcount}[1]{%
  \ifcsdef{glo@\glsdetoklabel{#1}@indexed}%
  {\csuse{glo@\glsdetoklabel{#1}@indexed}}%
  {0}%
}
```

`\glsifindexed`

```
\newcommand*\glsifindexed}[3]{%
  \ifcsdef{glo@\glsdetoklabel{#1}@indexed}%
  {\expandafter\ifnum\csname glo@\glsdetoklabel{#1}@indexed\endcsname>0 #2\else#3\fi}%
  {#3}%
}
```

`\glsaddallunindexed`

```
\newcommand*\glsaddallunindexed}[1][\@glo@types]{%
  \forallglsentries[#1]{\@glo@entry}%
  {%
    \glsifindexed{\@glo@entry}{\glsadd[format=glsignore]{\@glo@entry}}%
  }%
}
```

`\glsencapwrcontent` This command was added to glossaries v4.50 so may not be defined.

```
\providecommand*\glsencapwrcontent}[1]{#1}
```

`\glswriteentry` Redefine to test for `indexonlyfirst` category attribute. This needs to use `\GlsXtrIfUnusedOrUndefined` instead of `\ifglsused` to allow it to work with `bib2gls`.

```
\renewcommand*\glswriteentry}[2]{%
  \glsxtrifindexing
  {%
    \ifglsindexonlyfirst
      \GlsXtrIfUnusedOrUndefined{#1}
      {#2}%
      {\glsxtrdoautoindexname{#1}{dualindex}}%
    \else
      \glsifattribute{#1}{indexonlyfirst}{true}%
      {%
        \GlsXtrIfUnusedOrUndefined{#1}%
        {#2}%
        {\glsxtrdoautoindexname{#1}{dualindex}}%
      }%
      {#2}%
    \fi
  }%
  {}%
}
```

`\@do@wrglossary` Hook into glossary indexing command so that it can also use `\index` at the same time if required and add user hook.

```
\appto\@do@wrglossary{\@glstr@do@wrindex
\glstrdowrglossaryhook{\@gls@label}%
}
```

(The label can be obtained from `\@gls@label` at this point.)

Similarly for the “noidx” version:

```
\gls@noidxglossary
\appto\gls@noidxglossary{\@glstr@do@wrindex
\glstrdowrglossaryhook{\@gls@label}%
}
```

```
\@glstr@do@wrindex
\newcommand*\@glstr@do@wrindex{%
\glstrdoautoindexname{\@gls@label}{dualindex}%
}
```

`\glstrdowrglossaryhook` Allow user to hook into indexing code. (Always used by `\glsadd`. Used by `\gls` when indexing, which may or may not occur depending on the indexing settings.)

```
\newcommand*\glstrdowrglossaryhook}[1]{}
```

`\@gls@alt@hyp@opt` Commands like `\gls` have a star or plus version. Provide a third symbol that the user can adapt for convenience.

```
\newcommand*\@gls@alt@hyp@opt}[1]{%
\let\glslinkvar\@firstofthree

\def\@gls@hyp@opt@cs{#1}%
\ifstar{\s@gls@hyp@opt}%
{\@ifnextchar+%
{\@firstoftwo{\p@gls@hyp@opt}}%
{%
\expandafter\@ifnextchar\@gls@alt@hyp@opt@char
{\@firstoftwo{\@alt@gls@hyp@opt}}%
{#1}%
}%
}%
}
```

`\@alt@gls@hyp@opt` User version

```
\newcommand*\@alt@gls@hyp@opt}[1][[]]{%
\let\glslinkvar\@firstofthree
\expandafter\@gls@hyp@opt@cs\expandafter[\@gls@alt@hyp@opt@keys,#1]}
```

`\@gls@alt@hyp@opt@char` Contains the character used as the command modifier.

```
\newcommand*\@gls@alt@hyp@opt@char{-}
```

`\@gls@alt@hyp@opt@keys` Contains the option list used as the command modifier.

```
\newcommand*{\@gls@alt@hyp@opt@keys}{}
```

`\GlsXtrSetAltModifier`

```
\newcommand*{\GlsXtrSetAltModifier}[2]{%
```

```
\let\@gls@hyp@opt\@gls@alt@hyp@opt
```

Check that the supplied character isn't "+" or "*"

```
\ifstrequal{#1}{+}%
```

```
{\PackageError{glossaries-extra}%
```

```
{Can't use '#1' as modifier (it's already in use)}{}}%
```

```
{%
```

```
\ifstrequal{#1}{*}%
```

```
{\PackageError{glossaries-extra}%
```

```
{Can't use '#1' as modifier (it's already in use)}{}}%
```

```
{}%
```

```
}%
```

```
\def\@gls@alt@hyp@opt@char{#1}%
```

```
\def\@gls@alt@hyp@opt@keys{#2}%
```

```
\ifdefequal\@glsxtr@record@setting\@glsxtr@record@setting@off
```

```
{}%
```

```
{%
```

Let bib2gls know the modifier.

```
\protected@write\@auxout{}{\string\providecommand{\string\@glsxtr@altmodifier}[1]{}}%
```

```
\protected@write\@auxout{}{\string\@glsxtr@altmodifier{#1}}%
```

```
}%
```

```
}
```

`\GlsXtrSetPlusModifier` Allow user to override the plus modifier.

```
\newcommand*{\GlsXtrSetPlusModifier}[1]{%
```

```
\renewcommand*{\p@gls@hyp@opt}[1] [] {%
```

```
\let\glslinkvar\@thirdofthree
```

```
\@gls@hyp@opt@cs[#1,##1]%
```

```
}%
```

```
}
```

`\GlsXtrSetStarModifier` Allow user to override the star modifier.

```
\newcommand*{\GlsXtrSetStarModifier}[1]{%
```

```
\renewcommand*{\s@gls@hyp@opt}[1] [] {%
```

```
\let\glslinkvar\@secondofthree
```

```
\@gls@hyp@opt@cs[#1,##1]%
```

```
}
```

```
}
```

`\glsxtr@org@dohyperlink`

```
\let\glsxtr@org@dohyperlink\glsdohyperlink
```

`\glsnavhyperlink` Since `\glsnavhyperlink` uses `\glslink`, it's necessary to patch it uses `\glsdohyperlink` instead of `\glsxtrdohyperlink`. The simplest way to achieve this is to locally let `\glsxtrdohyperlink` to `\glsdohyperlink`.

This command is provided by `glossary-hypernav` so it may not exist.

```
\ifdef\glsnavhyperlink
{
  \renewcommand*\glsnavhyperlink}[3][\@glo@type]{%
    \protected@edef\gls@grplabel{#2}\protected@edef\gls@grptitle{#3}%
```

Scope:

```
{%
  \let\glsxtrdohyperlink\glsxtr@org@dohyperlink
  \@glslink{\glsnavhyperlinkname{#1}{#2}}{#3}%
}%
}%
}
```

Patch if `glossaries` pre 4.50.

```
\ifdef\@@gls@navhypertarget
{}
{%
```

`\glsnavhypertarget`

```
\renewcommand*\glsnavhypertarget}{\protect\@@gls@navhypertarget}
```

`\@@gls@navhypertarget`

```
\newcommand*\@@gls@navhypertarget}[3][\@glo@type]{%
  \@glsnavhypertarget{#1}{#2}{#3}%
}
}%
```

NB `glossary-hypernav` v4.53 switched to \LaTeX 3 sequences, so check for the existence of `\glsnavhypergroupdotarget`:

```
\ifdef\glsnavhypergroupdotarget
{
```

`\glsnavhypergroupdotarget`

```
\renewcommand\glsnavhypergroupdotarget[3]{%
  \glsxtr@do@org@target{\glsnavhyperlinkname{#1}{#2}}{#3}%
}
}
```

`\@glsnavhypertarget` Similarly for `\@glsnavhypertarget`. (NB this patch should not be used with `glossaries` v4.53+)

```
\ifdef\@glsnavhypertarget
```

```

{%
\renewcommand*{\glsnavhypertarget}[3]{%
\protected@write\@auxout{}\string\@gls@hypergroup{#1}{#2}}%
\@glsxtr@do@org@target{\glsnavhyperlinkname{#1}{#2}}{#3}%
\ifcsdef{\gls@hypergroup@list@#1}%
{%
\letcs\@gls@list{\@gls@hypergroup@list@#1}%
\protected@edef\@gls@thishypernavlabel{#2}%
\expandafter\DTLifinlist\expandafter{\@gls@thishypernavlabel}\@gls@list}%
{%
\GlossariesWarningNoLine{Navigation panel

```

The redefinition of `\glsdohyperlink` has been causing problems so introduce a new command instead.

`\glsxtrdohyperlink` Unpleasant complications can occur if the text or first key etc contains `\gls`, particularly if there are hyperlinks. To get around this problem, patch `\glsdohyperlink` so that it temporarily makes `\gls` behave like `\glstext` [*hyper=false,noindex*]. (This will be overridden if the user explicitly cancels either of those options in the optional argument of `\gls` or using the plus version.) This also patches the short form commands like `\acrshort` and `\glsxtrshort` to use `\glsentryshort` and, similarly, the long form commands like `\acrlong` and `\glsxtrlong` to use `\glsentrylong`. Added attribute check.

```

\newcommand*{\glsxtrdohyperlink}[2]{%
\gls@hasattribute{\gls@label}{targeturl}%
{%
\gls@hasattribute{\gls@label}{targetname}%
{%
\gls@hasattribute{\gls@label}{targetcategory}%
{%
\hyperref{\gls@getattribute{\gls@label}{targeturl}}%

```

```

        {\glsgetattribute{\glslabel}{targetcategory}}%
        {\glsgetattribute{\glslabel}{targetname}}%
        {\glsxtrprotectlinks#2}}%
    }%
    {%
    \hyperref{\glsgetattribute{\glslabel}{targeturl}}%
    {}%
    {\glsgetattribute{\glslabel}{targetname}}%
    {\glsxtrprotectlinks#2}}%
    }%
    }%
    {%
    \href{\glsgetattribute{\glslabel}{targeturl}}%
    {\glsxtrprotectlinks#2}}%
    }%
    }%
    {%
    Check for alias.
    \glsfieldfetch{\glslabel}{alias}{\gloaliaslabel}%
    \ifvoid\gloaliaslabel
    {%
    \glsxtrhyperlink{#1}{\glsxtrprotectlinks#2}}%
    }%
    {%
    Is the alias a multi-entry?
    \glsxtrifmulti\gloaliaslabel
    {%
    Get the main target.
    \letcs\gloaliaslabel{@gls@combined@\gloaliaslabel @main}%
    }%
    {}%
    Redirect link to the alias target.
    \glsxtrhyperlink
    {\glolinkprefix\glsdetoklabel{\gloaliaslabel}}%
    {\glsxtrprotectlinks#2}}%
    }%
    }%
    }

```

`\glsxtrhyperlink` Allows integration with the base glossaries package's `debug=showtargets` option.

```

\ifdef\glsdohyperlinkhook
{
  \newcommand{\glsxtrhyperlink}[2]{%
    \glsdoshowtarget{#1}{\glsdohyperlinkhook{#1}{#2}\hyperlink{#1}{#2}}%
  }%
}
{

```

```

\newcommand{\glxtrhyperlink}[2]{%
  \glsdoshowtarget{#1}{\hyperlink{#1}{#2}}%
}%
}

```

`\glisablehyper` Redefine to set `\glslabel` (to allow it to be picked up by `\glsdohyperlink`). Also made it robust and added grouping to localise the definition of `\glslabel`. The original internal command `@glo@label` could probably be simply replaced with `\glslabel`, but it's retained in case its removal causes unexpected problems.

```

\renewrobustcmd*{\glshyperlink}[2][\glstrytext{\@glo@label}]{%
  \glsdifexists{#2}%
  {%
    \def\@glo@label{#2}%

    {\protected@edef\glslabel{#2}%
     \@glslink{\glo@linkprefix\glslabel}{#1}}%
  }%
}

```

`\glisablehyper` Redefine in case we have an old version of glossaries. This now uses `\def` rather than `\let` to allow for redefinitions of `\glsdonohyperlink`.

```

\renewcommand{\glisablehyper}{%
  \KV@glslink@hyperfalse
  \def\@glslink{\glsdonohyperlink}%
  \let\@glstarget\@secondoftwo
}

```

`\glisablehyper` This now uses `\def` rather than `\let` to allow for redefinitions of `\glsdohypertarget` and `\glsdohyperlink`.

```

\renewcommand{\glisablehyper}{%
  \KV@glslink@hypertrue
  \def\@glslink{\glxtrdohyperlink}%
  \def\@glstarget{\glsdohypertarget}%
}

```

`\glsdonohyperlink` This command was only introduced in glossaries v4.20, so it may not be defined (therefore use `\def`). For older glossaries versions, this won't be used if `hyperref` hasn't been loaded, which means the indexing will still take place. The generated text is scoped (the link text in `\hyperlink` is also scoped, so it's consistent).

```

\def\glsdonohyperlink#1#2{\glxtrprotectlinks #2}

```

`\@glslink` Reset `\@glslink` with patched versions:

```

\ifcsundef{hyperlink}%
{%
  \def\@glslink{\glsdonohyperlink}
}%
{%
  \def\@glslink{\glxtrdohyperlink}
}

```

`\glsxtrprotectlinks` Make `\gls` (and variants) behave like the corresponding `\glsstext` (and variants) with hyperlinking and indexing off.

```

\newcommand*{\glsxtrprotectlinks}{%

1.3.5 Entry Counting

The (use) entry counting mechanism from `glossaries` is adjusted here to work with category attributes. Provide a convenient command to enable entry counting, set the `entrycount` attribute for given categories and redefine `\gls` etc to use `\cgl` instead. This form of entry counting is provided to adjust the formatting if the number of times an entry has been used (through commands that unset the first use flag) doesn't exceeding the specified threshold. For link counting, see §1.4.

First adjust definitions of the `unset` and `reset` commands to provide a hook, but changing the flag can cause problems in certain situations, so to allow the normal unsetting to be temporarily disabled, `\@glsunset` is let to

`\@glxtr@unset`, which performs the actual unsetting through `\@@glsunset` and then does the hook. This means that the unsetting (and the hook) can be switched off by redefining `\@glsunset` and then switched back on again by changing the definition back to `\@glxtr@unset`.

`\@glxtr@unset` Global unset.

```
\newcommand*{\@glxtr@unset}[1]{%
  \@glsunset{#1}%
  \glxtrpostunset{#1}%
}%
```

`\@glsunset` Global unset.

```
\let\@glsunset\@glxtr@unset
```

`\glxtrpostunset`

```
\newcommand*{\glxtrpostunset}[1]{}
```

Provide a command to store a list of labels that will need unsetting.

`\GlsXtrStartUnsetBuffering`

```
\newcommand*{\GlsXtrStartUnsetBuffering}{%
  \ifstar\s@GlsXtrStartUnsetBuffering\@GlsXtrStartUnsetBuffering
}
```

`\@GlsXtrStartUnsetBuffering` Unstarred version doesn't check for duplicates.

```
\newcommand*{\@GlsXtrStartUnsetBuffering}{%
  \let\@glxtr@org@unset@buffer\@glxtr@unset@buffer
  \GlsXtrClearUnsetBuffer
  \let\@glsunset\@glxtrbuffer@unset

\glssetcategoryattribute{\@glsxtr@cat}{unitcount}{#3}%
}%
}%
}
```

1.3.6 Acronym Modifications

It's more consistent to use the abbreviation code for acronyms, but make some adjustments to allow for continued use of the `glossaries` package's custom acronym format. (For example, user may already have defined some acronym styles with `\newacronymstyle` which they would like to continue to use.) The original `glossaries` acronym code can be restored with `\RestoreAcronyms`, but adjust `\SetGenericNewAcronym` so that `\newacronym` adds the category.

`\SetGenericNewAcronym`

```
\renewcommand*\SetGenericNewAcronym}{%
```

Make sure `\RestoreAcronyms` has been used.

```
\ifdefequal\@addtoacronymlists\@glsxtr@org@addtoacronymlists

  \ifdim\dimen@<\glsacspacemax
    \glsxtrgenentrytextfmt{~}%
  \else
    \glsxtrgenentrytextfmt{ }%
  \fi
}
```

1.3.7 Indexing and Displaying Glossaries

From time-to-time users ask if they can have one glossary sorted normally and another sorted by definition or usage. With the base `glossaries` package this can only be achieved with the “`noidx`” commands (Option 1). This is an attempt to mix and match.

First we need a list of the glossaries that require `makeindex/xindy`.

`\@glsxtr@reg@glosslist`

```
\newcommand*{\@glsxtr@reg@glosslist}{}
```

Save the original definition of `\makeglossaries`:

```
\let\@glsxtr@org@makeglossaries\makeglossaries
```

`saries@warn@noprintglossary` This command was only introduced to `glossaries v4.47` so it may not be defined.

```
\providecommand\@makeglossaries@warn@noprintglossary{%
  \ifdefstring{\@glo@types}{,}%
  {%
    \GlossariesWarningNoLine{No glossaries have been defined}%
  }%
  {%
    \GlossariesWarningNoLine{No \string\printglossary\space
      or \string\printglossaries\space
      found. ^^J(Remove \string\makeglossaries\space if you
      don't want any glossaries.) ^^JThis document will not
      have a glossary}%
  }%
}%
```

`\@domakeglossaries` `glossaries v4.45` introduced `\@domakeglossaries` to provide a way of disabling `\makeglossaries`. If it hasn't been defined, define here to do its argument:

```
\providecommand{\@domakeglossaries}[1]{#1}
```

`\@gls@automake@types` Added to `glossaries v4.50` so may not be defined.

```
\providecommand{\@gls@automake@types}{\@glo@types}
```

Redefine `\makeglossaries` to take an optional argument. This should be empty for the usual behaviour (all glossaries need processing with an indexing application) or a comma-separated list of glossary labels indicating those glossaries that should be processed with an indexing application. The optional argument version shouldn't be used with `record`.

`\makeglossaries`

```
\renewcommand*{\makeglossaries}[1] [] {%
  \ifx\@glsxtr@record@setting\@glsxtr@record@setting@alsoindex
    \edef\glsindexingsetting{bib2gls-\ifglsxindy xindy\else makeindex\fi}%
  \else
    \ifglsxindy
      \def\glsindexingsetting{xindy}%
    \fi
  \fi
}
```

```

\else
  \def\glsindexingsetting{makeindex}%
\fi
\fi
\@domakeglossaries
{%
  \@glsxtr@if@record@only
  {%
    \PackageError{glossaries-extra}{\string\makeglossaries\space
      not permitted\MessageBreak with record=\@glsxtr@record@setting\space
      package option}%
    {You may only use \string\makeglossaries\space with
      record=off or record=hybrid options}%
  }%
  {%
    \ifblank{#1}%
    {%
      \@glsxtr@org@makeglossaries

      \ifx\@glsxtr@record@setting\@glsxtr@record@setting@alsoindex

```
\newcommand*{\@gls@warn@makegloss@incompatible}[2]{%
  #2\GlossariesExtraWarning{#1\space is incompatible with \string\makeglossaries}%
}
```

The optional argument version of `\makeglossaries` needs an adjustment to `\@printglossary` to allow `\@glo@assign@sortkey` to pick up the glossary type.

Earlier versions of `glossaries-extra` simply saved the original version of `\@printglossary` with `\let \@glsxtr@orgprintglossary`. This was later changed to actually defining `\@glsxtr@orgprintglossary` to something similar with some alterations to allow for ignored glossaries, which don't have an associated title and to by-pass the existence check with `\ifglossaryexists` which doesn't recognise ignored glossaries. (`bib2gls` writes `\provideignoredglossary` to the `gls.tex` file for some settings, so the glossary might not be defined on the first L^AT_EX run and it needs to be allowed with `\printunsrtglossary` on subsequent runs.)

Unfortunately, removing the existence check will cause an error if `\printglossary` is used with an ignored glossary.

As from `glossaries v4.46`, some new commands have been included to allow the existence check to be varied depending on whether or not ignored glossaries should be allowed, so check for them:

glsxtr@printgloss@checkexists

```
\ifdef\@printgloss@checkexists
{\newcommand\glsxtr@printgloss@checkexists{\@printgloss@checkexists}}
{\newcommand\glsxtr@printgloss@checkexists}[2]{#2}}
```

`\@glsxtr@orgprintglossary` (This command is also used for on-the-fly setting.)

```
\newcommand{\@glsxtr@orgprintglossary}[2]{%
  \def\@glo@type{\glsdefaulttype}%
```

Add check here.

```
\def\glossarytitle{%

`\glxtrglossentry` Users may prefer to have entries displayed throughout the document rather than gathered together in a list. This command emulates the way `\glossentry` behaves (without the style formatting commands like `\item`). This needs to define `\currentglossary` to the current glossary type (normally set at the start of `\@printglossary`) and needs to define `\glscurrententrylabel` to the entry's label (normally set before `\glossentry` and `\subglossentry`). This needs some protection in case it's used in a section heading.

```
\newcommand*\glxtrglossentry}[1]{%

`\printunsrtinnerglossary` Similar to `\printunsrtglossary` but doesn't add the section heading, preamble, postamble or start and end of theglossary. Grouping is automatically applied so it may cause a problem within tabular-like environments. The beginning and ending of theglossary should be added around this command (but ensure the style has been set first). The simplest way of doing this is to place `\printunsrtinnerglossary` inside the `printunsrtglossarywrap` environment.

```

`\glsxtrunsrtdo` Provide a user-level call to `\@glsxtr@noidx@do` to make it easier to define a new handler.

```
\newcommand{\glsxtrunsrtdo}{\@glsxtr@noidx@do}
```

`\glsxtrgroupfield` `bib2gls` provides a supplementary field labelled `secondarygroup` for secondary glossaries, so provide a way of switching to that field. (The `group` key still needs checking. There's no associated key with the internal field).

```
\newcommand*{\glsxtrgroupfield}{group}
```

The tabular-like glossary styles cause quite a problem with the iterative approach. In particular for the group skip. To compensate for this, the groups are now determined while `\@glsxtr@doglossary` is being constructed rather than in the handler.

`\@glsxtr@checkgroup` The argument is the entry's label. (This block of code was formerly in `\@glsxtr@noidx@do`.) Now that this is no longer within a tabular environment, the global definitions aren't needed. The result is now stored in

`\@glsxtr@groupheading`, which will be empty if no heading is required. The current hierarchical level must have first been saved to `\glscurrententrylevel`.

```

1.4 Link Counting

This is different to the entry counting provided by the base package (which counts the number of times the first use flag is unset). Instead, this method hooks into `\@gls@link` (through `\glsxtr@inc@linkcount`) to increment an associated counter. To preserve resources, the counter is only defined if it needs to be incremented. This method is independent of the presence of hyperlinks. (The “link” part of the name refers to `\@gls@link` not `\hyperlink`.)

`\@glsxtr@do@inc@linkcount` This performs the actual incrementing and counter definition. The counter is given by `\c@glsxtr@linkcount@<label>` where *<label>* is the entry’s label. Since this is performed within `\@gls@link` the label can be accessed with `\glslabel`.

```
\newcommand*\@glsxtr@do@inc@linkcount}{%
```

Does this entry have the linkcount attribute set?

```
\glsifattribute{\glslabel}{linkcount}{true}%
{%
```

Does the counter exist?

```
\ifcsdef{c@glsxtr@linkcount@\glslabel}{}%
{%
```

Counter doesn’t exist, so define it.

```
\newcounter{glsxtr@linkcount@\glslabel}%
```

If linkcountmaster is set, add to counter reset.

```
\glsattribute{\glslabel}{linkcountmaster}%
{%
```

Need to ensure values are fully expanded.

```
\begingroup
\edef\@glo@tmp{\endgroup\noexpand\@addtoreset{glsxtr@linkcount@\glslabel}%
{\glsattribute{\glslabel}{linkcountmaster}}}%
\@glo@tmp
}%
{}%
}%
```

Increment counter:

```
\glxtrinlinkcounter{glxtr@linkcount@glslabel}%  
}%  
{}%  
}
```

`\glxtrinlinkcounter` May be redefined to use `\refstepcounter` if required.

```
\newcommand*{\glxtrinlinkcounter}[1]{\stepcounter{#1}}
```

`\GlsXtrLinkCounterValue` Expands to the associated link counter register or 0 if not defined.

```
\newcommand*{\GlsXtrLinkCounterValue}[1]{%  
  \ifcsundef{c@glxtr@linkcount@#1}{0}{\csname c@glxtr@linkcount@#1\endcsname}%  
}
```

`\GlsXtrTheLinkCounter` Expands to the display value of the associated link counter or 0 if not defined.

```
\newcommand*{\GlsXtrTheLinkCounter}[1]{%  
  \ifcsundef{theglxtr@linkcount@#1}{0}%  
  {\csname theglxtr@linkcount@#1\endcsname}%  
}
```

`\GlsXtrIfLinkCounterDef` Tests if the counter has been defined

```
\newcommand*{\GlsXtrIfLinkCounterDef}[3]{%  
  \ifcsundef{theglxtr@linkcount@#1}{#3}{#2}%  
}
```

`\GlsXtrLinkCounterName` Expands to the associated link counter name. (No check for existence.)

```
\newcommand*{\GlsXtrLinkCounterName}[1]{glxtr@linkcount@#1}
```

```
\GlsXtrEnableLinkCounting[master counter]{categories}
```

`\GlsXtrEnableLinkCounting`

Enable link counting for the given categories.

```
\newcommand*{\GlsXtrEnableLinkCounting}[2][1]{%  
  \let\glxtr@inc@linkcount\@glxtr@do@inc@linkcount  
  \@for\@glxtr@label:=#2\do

    }%  
  }%  
}
```

```
\@onlypreamble\GlsXtrEnableLinkCounting
```

1.5 Integration with glossaries-accsupp

Provide better integration with the `glossaries-accsupp` package. (Must be loaded before the main code of `glossaries-extra` either explicitly or through the `accsupp` package option.)

These commands have their definitions set according to whether or not `glossaries-extra` has been loaded.

To allow for formatting commands that need to go inside all other commands (such as the commands provided by `soul`), also add version of each command that takes a text-block command as an argument.

```
\@ifpackageloaded{glossaries-accsupp}
{
```

Define (or redefine) commands to use the accessibility information.

`\glsaccessname` Display the name value (no link and no check for existence).

```
\newcommand*\glsaccessname}[1]{%

As from `glossaries v4.45`, the replacement text support has been corrected so that the accessibility support for abbreviations use the “E” (expanded value) element. This should actually contain the long form since it’s supposed to explain the abbreviation. This is a bit redundant on first use for styles like `long-short`.

```
\glsdefaultshortaccess{<long>}{<short>}
```

`\glsdefaultshortaccess`

This command was only introduced to `glossaries-accsupp 4.45` so it may not be defined. This was defined to do #1 (#2) but the original definition is more appropriate, so has been reverted back to the definition provided by `glossaries-accsupp`.

```
\providecommand*\glsdefaultshortaccess}[2]{#1}
```

`\glstrassignactualsetup`

```
\newcommand\glstrassignactualsetup{%
  \let\@empty

1.6 Categories

`\glscategory` Add a new storage key that can be used to indicate a category. The default category is `general`.

```
\glsaddstoragekey{category}{general}{\glscategory}
```

`\glsifcategory` Convenient shortcut to determine if an entry has the given category.

```

\newcommand{\glsifcategory}[4]{%
\ifglsfieldeq{#1}{category}{#2}{#3}{#4}%
}

```

Categories can have attributes.

```

\glssetcategoryattribute{<category>}{<attribute-label>}
{<value>}

```

`\glssetcategoryattribute`

Set (or override if already set) an attribute for the given category.

```

\newcommand*{\glssetcategoryattribute}[3]{%
\csdef{@glsxtr@categoryattr@#1#2}{#3}%
}

```

```

\glssetcategoriesattribute{<category list>}
{<attribute-label>}{<value>}

```

`\glssetcategoriesattribute`

Similar to above, but globally apply to each category in the list.

```

\newcommand*\glsssetcategoriesattribute}[3]{%
  \@for\@gls@thiscatlabel:=#1\do{%
    \csgdef{@glsxtr@categoryattr@#@gls@thiscatlabel @#2}{#3}%
  }%
}

```

```

\glsssetcategoriesattributes{<category list>}
{<attribute-label list>}{<value>}

```

`\glsssetcategoriesattributes`

Similar to above, but apply to each category and attribute in the list.

```

\newcommand*\glsssetcategoriesattributes}[3]{%

```

Group to avoid problems with nested `\@for`.

```

{%

}%
}
```

Set attributes for the default general category:

```
\glssetcategoryattribute{general}{regular}{true}
```

Acronyms are regular by default, since they're typically just treated like normal words.

```
\glssetcategoryattribute{acronym}{regular}{true}
```

`\glssetregularcategory` Convenient shortcut to add the regular attribute.

```
\newcommand*{\glssetregularcategory}[1]{%
\glssetcategoryattribute{#1}{regular}{true}%
}
```

`\glsifregularcategory`

```
\glsifregularcategory{<category>}{<true part>}{<false part>}
```

Short cut to determine if a category has the regular attribute explicitly set to true.

```
\newcommand{\glsifregularcategory}[3]{%
\glsifcategoryattribute{#1}{regular}{true}{#2}{#3}%
}
```

`\glsifnotregularcategory`

```
\glsifnotregularcategory{<category>}{<true part>}{<false
part>}
```

Short cut to determine if a category has the regular attribute explicitly set to false.

```
\newcommand{\glsifnotregularcategory}[3]{%
\glsifcategoryattribute{#1}{regular}{false}{#2}{#3}%
}
```

`\glsifregular`

```
\glsifregular{<entry label>}{<true part>}{<false part>}
```

Short cut to determine if an entry has a regular attribute set to true.

```
\newcommand{\glsifregular}[3]{%
  \glsifregularcategory{\glscategory{#1}}{#2}{#3}%
}
```

`\glsifnotregular`

```
\glsifnotregular{<entry label>}{<true part>}{<false part>}
```

Short cut to determine if an entry has a regular attribute set to false.

```
\newcommand{\glsifnotregular}[3]{%
  \glsifnotregularcategory{\glscategory{#1}}{#2}{#3}%
}
```

`\glsforeachincategory`

```
\glsforeachincategory[<glossary
labels>]{<category-label>}{<glossary-cs>}{<label-cs>}
{<body>}
```

Iterates through all entries in all the glossaries (or just those listed in `<glossary labels>`) and does `<body>` if the category matches `<category-label>`. The control sequences `<glossary-cs>` and `<label-cs>` may be used in `<body>` to access the glossary label and entry label for the current iteration.

```
\newcommand{\glsforeachincategory}[5][\@glo@types]{%
  \forallglossaries[#1]{#3}%
  {%
    \forglsentries[#3]{#4}%
    {%
      \glsifcategory{#4}{#2}{#5}{}%
    }%
  }%
}
```

`\glsforeachwithattribute`

```
\glsforeachwithattribute[<glossary
labels>]{<attribute-label>}{<attribute-value>}
{<glossary-cs>}{<label-cs>}{<body>}
```

Iterates through all entries in all the glossaries (or just those listed in `<glossary labels>`) and does `<body>` if the category attribute `<attribute-label>` matches `<attribute-value>`. The control sequences `<glossary-cs>` and `<label-cs>` may be used in `<body>` to access the glossary label and entry label for the current iteration.

```
\newcommand{\glsforeachwithattribute}[6][\@glo@types]{%
```

```

\forallglossaries[#1]{#4}%
{%
  \forallglsentries[#4]{#5}%
  {%
    \glsifattribute{#5}{#2}{#3}{#6}{}%
  }%
}%
}

```

If `\newterm` has been defined, redefine it so that it automatically sets the category label to `index` and add `\glsxtrpostdescription`.

```

\ifdef\newterm
{%

```

```

\newterm

```

```

  \renewcommand*\newterm}[2] []{%
    \newglossaryentry{#2}%
    {type={index},category=index,name={#2},%
     description={\glsxtrpostdescription\nopostdesc},#1}%
  }

```

Indexed terms are regular by default.

```

\glssetcategoryattribute{index}{regular}{true}

```

```

\glsxtrpostdescindex

```

```

  \newcommand*\glsxtrpostdescindex{}
}
{}

```

If the `symbols` package option was used, define a similar command for symbols, but set the default sort to the label rather than the name as the symbols will typically contain commands that will confuse `makeindex` and `xindy`.

```

\ifdef\printsymbols
{%

```

`\glsxtrnewsymbol` Unlike `\newterm`, this has a separate argument for the label (since the symbol will likely contain commands).

```

  \newcommand*\glsxtrnewsymbol}[3] []{%
    \newglossaryentry{#2}{name={#3},sort={#2},type=symbols,category=symbol,#1}%
  }

```

Symbols are regular by default.

```

\glssetcategoryattribute{symbol}{regular}{true}

```

```

\glsxtrpostdescsymbol

```

```

  \newcommand*\glsxtrpostdescsymbol{}
}
{}

```

Similar for the numbers option.

```
\ifdef\printnumbers  
{%
```

`\glsxtrnewnumber`

```
\ifdef\printnumbers  
  \newcommand*\glsxtrnewnumber[3][ ]{%  
    \newglossaryentry{#2}{name={#3},sort={#2},type=numbers,category=number,#1}%  
  }  
}
```

Numbers are regular by default.

```
\glssetcategoryattribute{number}{regular}{true}
```

`\glsxtrpostdescnumber`

```
\newcommand*\glsxtrpostdescnumber{}  
}  
{}
```

`\glsxtrsetcategory` Set the category for all listed labels. The first argument is the list of entry labels and the second argument is the category label.

```
\newcommand*\glsxtrsetcategory[2]{%  
  \@for\@glsxtr@label:=#1\do  
  {%  
    \glsfieldxdef{\@glsxtr@label}{category}{#2}%  
  }%  
}
```

`\glsxtrsetcategoryforall` Set the category for all entries in the listed glossaries. The first argument is the list of glossary labels and the second argument is the category label.

```
\newcommand*\glsxtrsetcategoryforall[2]{%  
  \forallglossaries[#1]{\@glsxtr@type}{%  
    \for\glsentries[\@glsxtr@type]{\@glsxtr@label}%  
    {%  
      \glsfieldxdef{\@glsxtr@label}{category}{#2}%  
    }%  
  }%  
}
```

`\glsxtrfieldtitlecase`

```
\glsxtrfieldtitlecase{<label>}{<field>}
```

Apply title casing to the contents of the given field.

```
\newcommand*\glsxtrfieldtitlecase[2]{%  
  \expandafter\glsxtrfieldtitlecasecs\expandafter  
  {\csname glo@glsdetoklabel{#1}@#2\endcsname}%  
}
```

`\glxtrfieldtitlecasecs` The command used by `\glxtrfieldtitlecase`. May be redefined to use a different command, for example, `\xcapitalisefmtwords`. Check for `\glscapitalisewords`, which was added to glossaries v4.48.

```

\ifdef\glscapitalisewords
{
  \newcommand*\glxtrfieldtitlecasecs[1]{%
    \expandafter\glscapitalisewords\expandafter{#1}}
}
{
  \newcommand*\glxtrfieldtitlecasecs[1]{\xcapitalisewords{#1}}
}

```

Provide a convenient way to modify glossary styles without having to define a new style just to convert the first letter of fields to upper case.

`\glossentrydesc` If the `glossdesc` attribute is “firstuc” convert first letter to upper case. If the attribute is “title” use title case.

```

```

`\glxtrifperiod` Make a convenient user command to check if the next character is a full stop (period). Works like `\@ifstar` but uses `\new@ifnextchar` rather than `\@ifnextchar`

```

\newcommand*\glxtrifperiod}[1]{\new@ifnextchar.{\@firstoftwo{#1}}}

```

Sometimes it's useful to test if there's a punctuation character following the glossary entry.

`\glxtr@punclist` List of characters identified as punctuation marks. (Be careful of `babel` short-hands!) This doesn't allow for punctuation marks made up from multiple characters (such as `'`).

```

\newcommand*\glxtr@punclist}{.,;?!}

```

`\glxtraddpunctuationmark` Add character to punctuation list.

```

\newcommand*\glxtraddpunctuationmark}[1]{\appto\glxtr@punclist{#1}}

```

`\glxtrsetpunctuationmarks` Reset the punctuation list.

```

\newcommand*\glxtrsetpunctuationmarks}[1]{\def\glxtr@punclist{#1}}

```

```

\glxtrifnextpunc{<true part>}{<false part>}

```

`\glxtrifnextpunc`

Test if this is followed by a punctuation mark. (Adapted from `\new@ifnextchar`.)

```

\newcommand*\glxtrifnextpunc}[2]{%
\def\reserved@a{#1}%
\def\reserved@b{#2}%
\futurelet\@glspunc@token\glxtr@ifnextpunc
}

```

```

\glxtr@ifnextpunc
    \newcommand*\glxtr@ifnextpunc}{%

\@glxtr@swaptwo
    \newcommand*\@glxtr@swaptwo}[2]{#2#1}

```

1.7 Abbreviations

The “acronym” code from `glossaries` is misnamed as it’s more often used for other forms of abbreviations. This code corrects this inconsistency, but rather than just having synonyms, provide commands for abbreviations that have a similar, but not identical, underlying mechanism to acronyms.

If there’s a style for the given category, it needs to be applied by `\newabbreviation`.

```
\define@key{glsxtrabbrv}{category}{%
  \protected@edef\glscategorylabel{#1}%
}
```

The `shortplural` and `longplural` are parsed separately, so are now in another key family. Save the short plural form. This may be needed before the entry is defined.

```
\define@key{glsxtrabbrvpl}{shortplural}{%
  \def\@gls@shortpl{#1}%
}
```

Similarly for the long plural form.

```
\define@key{glsxtrabbrvpl}{longplural}{%
  \def\@gls@longpl{#1}%
}
```

Token registers for the short plural and long plural, provided for use in the abbreviation style definitions.

```
\glsshortpltok
\newtoks\glsshortpltok
```

```
\glslongpltok
\newtoks\glslongpltok
```

`\@glsxtr@insertdots` Provided in case user wants to automatically insert dots between each letter of the abbreviation. This should be applied before defining the abbreviation to optimise the document build. (Otherwise, it would have to be done each time the short form is required, which is an unnecessary waste of time.) For this to work the short form must be expanded when passed to `\newabbreviation`. Note that explicitly using the `short` or `shortplural` keys will override this.

```
\newcommand*{\@glsxtr@insertdots}[2]{%
  \def#1{%
    \@glsxtr@insert@dots#1#2\@nnil
  }
}
```

```
\@glsxtr@insert@dots
\newcommand*{\@glsxtr@insert@dots}[2]{%
  \ifx\@nnil#2\relax
  \let\@glsxtr@insert@dots@next\@gobble
  \else
  \ifx\relax#2\relax

```

```

\else
\appto#1{#2.}%
\fi
\let\@glxtr@insert@dots@next\@glxtr@insert@dots
\fi
\@glxtr@insert@dots@next#1%
}

```

Similarly provide a way of replacing spaces with `\glxtrwordsep`, which first needs to be defined:

```

\glxtrwordsep
\newcommand*\glxtrwordsep{\glxtrgenentrytextfmt{ }}

```

```

\glxtrwordsephyphen
\newcommand*\glxtrwordsephyphen{\glxtrgenentrytextfmt{-}}

```

Each word is marked with

```

\glxtrword
\newcommand*\glxtrword[1]{\glxtrgenentrytextfmt{#1}}

```

```

\@glxtr@markwordseps
\newcommand*\@glxtr@markwordseps[2]{%
\def#1{%
\@glxtr@mark@wordseps#1#2 \@nnil
}

```

```

\@glxtr@mark@wordseps
\def\@glxtr@mark@wordseps#1#2 #3{%
\ifdefempty{#1}%
{\def#1{\protect\glxtrword{#2}}}%
{\appto#1{\protect\glxtrwordsep\protect\glxtrword{#2}}}%
\ifx\@nnil#3\relax
\let\@glxtr@mark@wordseps@next\relax
\else
\def\@glxtr@mark@wordseps@next{%
\@glxtr@mark@wordseps#1#3}%
\fi
\@glxtr@mark@wordseps@next
}

```

`\newabbreviation` Define a new generic abbreviation.

```

\newcommand*\newabbreviation[4][[]]{%
\glxtr@newabbreviation{#1}{#2}{#3}{#4}%
}

```

`\glstr@newabbreviation` Internal macro. (bib2gls has an option that needs to temporarily redefine `\newabbreviation`. This is just makes it easier to save and restore the original definition.)

```
\newcommand*{\glstr@newabbreviation}[4]{%
  \glskeylisttok{#1}%

    \csname @glsabbrv@dispstyle@fmts@#1\endcsname
  }%
}

```

1.7.2 Predefined Styles

Define some common styles. These will set the `first`, `firstplural`, `text` and `plural` keys, even if the `regular` attribute isn’t set to “true”. If this attribute is set, commands like `\gls` will use them as per a regular entry, otherwise those keys will be ignored unless explicitly invoked by the user with commands like `\glsfirst`. In order for the sentence case versions to work correctly, `\glsxtrfullformat` needs to be expanded when those keys are set. The final optional argument of `\glsfirst` will behave differently to the final optional argument of `\gls` with some styles.

v1.49 has introduced `innertextformat` for formatting commands that need access to the actual text (which is normally too deeply embedded). The styles

have been modified to allow for this. The all caps versions also now need to be implemented within the styles as again the text is now to deeply embedded for the case change to otherwise work.

`\ifglxtrinsertinside` Switch to determine if the insert text should be inside or outside the font changing command. The default is outside.

```
\newif\ifglxtrinsertinside
\glxtrinsertinsidefalse
```

The abbreviation styles are now defined in the file `glossaries-extra-abbrstyles.def`, which needs to be input here:

```
\input{glossaries-extra-abbrstyles.def}
```

1.8 Using Entries in Headings

There are four main problems with using entries in sectioning commands: they can mess with the first use flag if they end up in the table of contents, they can add unwanted numbers to the entry's location list, the label is corrupted if used inside `\MakeUppercase` (which is used by the default headings style) and they need to be expandable for PDF bookmarks. The `glossaries` package therefore recommends the use of the expandable commands, such as `\glstryshort`, instead but this doesn't reflect the formatting since it doesn't include `\glabbrvfont`. The commands below are an attempt to get around these problems.

The PDF bookmark issue can easily be fixed with `hyperref`'s `\texorpdfstring` which can simply use the expandable command in the PDF string case. The `TEX` string case can now use `\glxtrshort` with the `noindex` key set, which prevents the unwanted additions to the location list, and the `hyper` key set to `false`, which prevents the problem of nested links. This just leaves one thing left that needs to be dealt with, and that's what to do if the heading style uses `\MakeUppercase`.

Note that `glossaries` automatically loads `textcase` unless `mfirstuc 2.08+` is detected, so the label can be protected from case change with `textcase`'s `\NoCaseChange`. This means that we don't have a problem provided the page style uses `\MakeTextUppercase`, but the default heading page style uses `\MakeUppercase`. (With newer versions of `mfirstuc`, exclusions are used to protect labels).

To get around this, save the original definition of `\markboth` and `\markright` and adjust it so that `\MakeUppercase` is temporarily redefined to `\MakeTextUppercase`. Some packages or classes redefine these commands, so we can't just assume they still have the original kernel definition. This only needs to be done with old versions of `mfirstuc`.

`\markright` Save original definition:

```
\let\@glxtr@org@markright\markright
```

Redefine (grouping not added in case it interferes with the original code):

```
\renewcommand*{\markright}[1]{%
\glxtrmarkhook
\@glxtr@org@markright{\@glxtrinmark#1\@glxtrnotinmark}%
\glxtrrestoremarkhook
}
```

`\markboth` Save original definition:

```
\let\@glxtr@org@markboth\markboth
```

Redefine (grouping not added in case it interferes with the original code):

```
\renewcommand*{\markboth}[2]{%
\glxtrmarkhook
\@glxtr@org@markboth
  {\@glxtrinmark#1\@glxtrnotinmark}%
  {\@glxtrinmark#2\@glxtrnotinmark}%
\glxtrrestoremarkhook
}
```

Also do this for `\@starttoc`

`\@starttoc` Save original definition:

```
\let\@glxtr@org@@starttoc\@starttoc
```

Redefine:

```
\renewcommand*{\@starttoc}[1]{%
\let\glxtrifintoc\@firstoftwo
\glxtrmarkhook
\@glxtrinmark
\@glxtr@org@@starttoc{#1}%
\@glxtrnotinmark
\glxtrrestoremarkhook
\let\glxtrifintoc\@secondoftwo
}
```

If this causes a problem provide a simple way of switching back to the original definitions:

`\glxtrRevertMarks`

```
\newcommand*{\glxtrRevertMarks}{%
\let\markright\@glxtr@org@markright
\let\markboth\@glxtr@org@markboth
\let\@starttoc\@glxtr@org@@starttoc
}
```

`\glxtrRevertTocMarks` Just restores `\@starttoc`.

```
\newcommand*{\glxtrRevertTocMarks}{%
\let\@starttoc\@glxtr@org@@starttoc
}
```

```
\glxtrifinmark
  \newcommand*\glxtrifinmark}[2]{#2}
```

```
\@glxtrinmark
  \newrobustcmd*\@glxtrinmark){%
    \let\glxtrifinmark\@firstoftwo
  }
```

```
\@glxtrnotinmark
  \newrobustcmd*\@glxtrnotinmark){%
    \let\glxtrifinmark\@secondoftwo
  }
```

```
\glxtrtitleorpdforheading
  \newcommand*\glxtrtitleorpdforheading}[3]{%
    \glxtrifinmark{#3}{\glstexorpdfstring{#1}{#2}}}
```

This will require `\GetTitleStringSetup{expand}` to work.

```
\ifdef\GetTitleStringDisableCommands
{\GetTitleStringDisableCommands{\let\glxtrtitleorpdforheading\@thirdofthree
  \let\glxtrifinmark\@firstoftwo}}
{}}
```

`\glxtrmarkhook` Hook used in new definition of `\markboth` and `\markright` to make some changes to apply to the marks:

```
\newcommand*\glxtrmarkhook){%
```

```

`\GLSxtrtitlefullpl` Command to display plural full form of abbreviation in section title in all upper case.

```
\newrobustcmd*{\GLSxtrtitlefullpl}[1]{%
\glxtr@title@field\GLSxtrfullpl{#1}%
}
```

`\glsfmtshort` Provide a way of using the formatted short form in section headings. If `hyperref` has been loaded, use `\texorpdfstring` for convenience in PDF bookmarks.

```
\newcommand*{\glsfmtshort}[1]{%
\glstexorpdfstring
{\glsxtrtitleshort{#1}}%
{\glsentryshort{#1}}%
}
```

Similarly for the plural version.

`\glsfmtshortpl`

```
\newcommand*{\glsfmtshortpl}[1]{%
\glstexorpdfstring
{\glsxtrtitleshortpl{#1}}%
{\glsentryshortpl{#1}}%
}
```

Use the expandable `\MFUsentencecase` in the PDF bookmark.

`\Glsfmtshort` Singular form (first letter uppercase).

```
\newcommand*{\Glsfmtshort}[1]{%
\glstexorpdfstring
{\Glsxtrtitleshort{#1}}%
{\MFUsentencecase{\glsentryshort{#1}}}%
}
\glsmfuaddmap{\glsfmtshort}{\Glsfmtshort}
```

`\Glsfmtshortpl` Plural form (first letter uppercase).

```
\newcommand*{\Glsfmtshortpl}[1]{%
\glstexorpdfstring
{\Glsxtrtitleshortpl{#1}}%
{\MFUsentencecase{\glsentryshortpl{#1}}}%
}
\glsmfuaddmap{\glsfmtshortpl}{\Glsfmtshortpl}
```

Similarly for all-caps.

```

\GLSfmtshort
  \newcommand*{\GLSfmtshort}[1]{%
    \glstexorpdfstring

1.9 Prefixes

Provide support for glossaries-prefix.

`\pglsprefix`

```
\pglsprefix{<entry-label>}{<prefix-field>}
```

A shortcut way of inserting the prefix and separator if they are required. If this needs to be redefined, use `\ifglsfieldvoid` for an expandable test.

```
\newcommand{\pglsprefix}[2]{%
  \ifcempty{glo@glsdetoklabel{#1}@#2}{}}
```

```

    {\csuse{glo@glsdetoklabel{#1}@#2}\glsprefixsep}%
}

```

`\Pglsprefix` `\Pglsprefix{<entry-label>}{<prefix-field>}`

Similar to `\pglsprefix` but sentence case. The conditional is omitted as it will have to already be checked.

```

\newcommand{\Pglsprefix}[2]{%
  \Glsxtrusefield{#1}{#2}\glsprefixsep
}

```

`\PGLSprefix` `\PGLSprefix{<entry-label>}{<prefix-field>}`

As `\pglsprefix` but all caps.

```

\newcommand{\PGLSprefix}[2]{%
  \ifcempty{glo@glsdetoklabel{#1}@#2}{}%
  {\glsuppercase{\csuse{glo@glsdetoklabel{#1}@#2}\glsprefixsep}}%
}

```

Abbreviations. Short form uses prefix and prefixplural fields.

`\pglsxtrshort` No case-change.

```

1.10 Multi (Combined/Compound) Entries

(I'd rather call these combined or compound entries but `\cgl`s is already taken.)

New to version 1.48, the commands here provide a way of referencing multiple entries as a single unit. For example, biological organisms are often referred to by their genus and species, such as *Clostridium botulinum* and *Clostridium perfringens* (where the genus is Clostridium). The genus is often abbreviated after first use, regardless of which species in the genus is being referenced. For example, “*Clostridium botulinum* and *C. perfringens*”. This can't be supported by any abbreviation styles unless the genus and species names are defined separately. For example:

```
%\setabbreviationstyle{long-only-short-only}
%\newabbreviation{clostridium}{C.}{Clostridium}
%\newglossaryentry{botulinum}{name={botulinum},description={}}
%\newglossaryentry{perfringens}{name={perfringens},description={}}
%
```

This means that the entries then need to be referenced using a rather cumbersome method:

```
%\gls{clostridium} \gls{botulinum} and \gls{clostridium}
%\gls{perfringens}
%
```

This section provides a command that will provide a way of defining a label that represents a combination of entries (which must all be first defined). For example:

```
%\multiglossaryentry{cbot}{clostridium,botulinum}
%
```

This label can then be referenced using `\mgls`, which internally uses `\gls` for each component. The last component in the list is considered the “main” component (not to be confused with the main glossary). If this isn't the case, the label of the main component should be added in the optional argument before the label list. Note that the multi-label (`cbot` in this case) can't be referenced using commands like `\gls`.

First define the general set of options that should be applied to all multi-entries. These can be set with:

```
\multiglossaryentrysetup
    \newcommand*{\multiglossaryentrysetup}[1]{\setkeys{glsxtrcombined}{#1}}
\@gls@combined@indexmain Numeric value: 0=false (don't index main component), 1=true (always index
main component), 2=first (only index main component on first use). Default:
1 (true);
    \newcommand*{\@gls@combined@indexmain}{1}
    \define@choicekey{glsxtrcombined}{indexmain}%
        [\@gls@combined@indexmain@val\@gls@combined@indexmain]
        {false,true,first}[true]{}
```

`\@gls@combined@indexothers` Numeric value: 0=false (don't index other components), 1=true (always index other components), 2=first (only index other components on first use). Default: 2 (first);

```

\newcommand*\@gls@combined@indexothers}{2}
\define@choicekey{glsxtrcombined}{indexothers}%
  [\@gls@combined@indexothers@val\@gls@combined@indexothers]
  {false,true,first}[true]{}

```

`\@gls@combined@hyper` Numeric value: 0=none (`\mgls` doesn't create a hyperlink), 1=allmain (all content hyperlinks to the main component), 2=mainonly (only the main component has a hyperlink), 3=individual (each component has a hyperlink to their own target). Default: 3.

```

\newcommand*\@gls@combined@hyper}{3}
\define@choicekey{glsxtrcombined}{hyper}%
  [\@gls@combined@hyper@val\@gls@combined@hyper]
  {none,allmain,mainonly,individual,otheronly,notmainfirst,nototherfirst,notfirst}{}

```

`\@gls@combined@encapmain` Location encap value for main component (corresponding to format key in `\gls`).

```

\newcommand*\@gls@combined@encapmain}{glsnumberformat}
\define@key{glsxtrcombined}{encapmain}{%
  \renewcommand*\@gls@combined@encapmain}{#1}%
}

```

`\@gls@combined@encapothers` Location encap value for other components (corresponding to format key in `\gls`).

```

\newcommand*\@gls@combined@encapothers}{glsnumberformat}
\define@key{glsxtrcombined}{encapothers}{%
  \renewcommand*\@gls@combined@encapothers}{#1}%
}

```

`\@gls@combined@textformat` Encapsulate entire content with the command identified by the given control sequence name.

```

\newcommand*\@gls@combined@textformat}{@firstofone}
\define@key{glsxtrcombined}{textformat}{%
  \renewcommand*\@gls@combined@textformat}{#1}%
}

```

`\@gls@combined@category` Assign a category to the combined set.

```

\newcommand*\@gls@combined@category}{%
\define@key{glsxtrcombined}{category}{%
  \renewcommand*\@gls@combined@category}{#1}%
}

```

Pre-options family:

```

\define@key{glsxtrcombinedpreopts}{category}{%
  \renewcommand*\@gls@combined@category}{#1}%
}

```

`\@gls@combined@mglsopts` Default options to pass to `\mgl`.

```
\newcommand*\@gls@combined@mglsopts{}
\define@key{glsxtrcombined}{mglsopts}{%
  \renewcommand*\@gls@combined@mglsopts{#1}%
}
\define@key{glsxtrcombinedpreopts}{mglsopts}{%
  \@gls@combined@mglsopts@do
  {%
    \renewcommand*\@gls@combined@mglsopts{#1}%
  }%
}
```

`\@gls@combined@mglsopts@do`

```
\newcommand*\@gls@combined@mglsopts@do}[1]{#1}
```

`\mgl@disable@mglsopts`

```
\newcommand*\mgl@disable@mglsopts{%
  \let\@gls@combined@mglsopts@do\@gls@combined@mglsopts@do@not
}
```

`\mgl@enable@mglsopts`

```
\newcommand*\mgl@enable@mglsopts{%

\glsmfublocker{\MPGLSmainpl}
```

Not currently implementing any other variations.

1.11 Multi-Lingual Support

Add the facility to load language modules, if they are installed, but none are provided with this package.

\glxtrcontinuedname Provide for use in \printunsrtable.

```
\providecommand{\glxtrcontinuedname}{continued}
```

\RequireGlossariesExtraLang

```
\newcommand*{\RequireGlossariesExtraLang}[1]{%  
  \@ifundefined{ver@glossariesxtr-#1.ldf}{\input{glossariesxtr-#1.ldf}}{}%  
}
```

\ProvidesGlossariesExtraLang

```
\newcommand*{\ProvidesGlossariesExtraLang}[1]{%  
  \ProvidesFile{glossariesxtr-#1.ldf}%  
}
```

Load any required language modules that are available. This doesn't generate any warning if none are found, since they're not essential. (The only command that really needs defining for the document is `\abbreviationsname`, which can simply be redefined. However, with `bib2gls` it might be useful to provide custom rules for a particular locale.)

`\glxtr@loaddialect` The dialect label should be stored in `\this@dialect` before using this command.

```
\newcommand{\glxtr@loaddialect}{%
  \IfTrackedLanguageFileExists{\this@dialect}%
  {glossariesxtr-}% prefix
  {.ldf}%
  {%
    \RequireGlossariesExtraLang{\CurrentTrackedTag}%
  }%
  {}% not found
```

If `glossaries-extra-bib2gls` has been loaded, `\@glxtrdialecthook` will check for the associated script, otherwise it will do nothing.

```
\@glxtrdialecthook
}
```

```
\@ifpackageloaded{tracklang} {%
  \AnyTrackedLanguages
  {%
    \ForEachTrackedDialect{\this@dialect}{\glxtr@loaddialect}%
  }%
  {}%
} {}
```

The style needs to be set at the end to ensure that `\setglossarystyle` has been redefined and extra style commands have been defined. Load `glossaries-extra-stylemods` if required.

```
\@glxtr@redefstyles
```

and set the style:

```
\@glxtr@do@style
```

2 Predefined Abbreviation Styles (`glossaries-extra-abbrstyles.def`)

```
\ProvidesFile{glossaries-extra-abbrstyles.def}[2025/01/03 v1.54 (NLCT)]
```

This file contains the predefined abbreviation styles. Some helper commands first.

`\glxtrlongshortname`

```
\newcommand*{\glxtrlongshortname}{%
  \glxspabbrvfont{\the\glsshorttok}{\glscategorylabel}%

2.2 Predefined Styles (Small Capitals)

These styles use `\textsc` for the short form.

`\glxtrscfont` Maintained for backward-compatibility.

```
\newcommand*\glxtrscfont[1]{\textsc{#1}}
```

`\glxabbrvscfont` Added for consistent naming.

```
\newcommand*\glxabbrvscfont{\glxtrscfont}
```

`\glxtrfirstscfont` Maintained for backward-compatibility.

```
\newcommand*\glxtrfirstscfont[1]{\glxabbrvscfont{#1}}
```

`\glsfirstabbrvscfont` Added for consistent naming.

```
\newcommand*\glsfirstabbrvscfont{\glxtrfirstscfont}
```

and for the default short form suffix:

`\glxtrscsuffix` `\protect` needs to come inside `\glxtrscsuffix` to avoid interfering with all caps.

```
\newcommand*\glxtrscsuffix{\protect\glstextup{\glxtrabbrvpluralsuffix}}
```

`\glxtrscinvert` Cancel smallcaps.

```
\newcommand*\glxtrscinvert[1]{\glstextup{#1}}%
```

v1.49: the following now use commands like `\glsfirstinnerfmtabbrvfont` instead of `\glsfirstabbrvscfont` etc. This makes it easier to apply the inner formatting. The scoping added in v1.48 with `\glslinkwrcontent` should prevent formatting leakage in the event of nested commands. The only problem will be if commands like `\glsentryfirst` are used, but those aren't designed for consistent formatting. It will also make it easier to locally redefine `\glsfirstinnerfmtabbrvfont` to strip the formatting if those commands are used (rather than having to define all the possible abbreviation style formatting commands). Since these new commands are robust they don't need protecting.

`long-short-sc`

2.3 Predefined Styles (Fake Small Capitals)

These styles require the `reysize` package, which must be loaded by the user. These styles all use:

`\glxtrsmfont` Maintained for backward compatibility.

```
\newcommand*{\glxtrsmfont}[1]{\textsmaller{#1}}
```

`\glsabbrvsmfont` Added for consistent naming.

```
\newcommand*{\glsabbrvsmfont}{\glxtrsmfont}
```

`\glxtrfirstsmfont` Maintained for backward compatibility.

```
\newcommand*{\glxtrfirstsmfont}[1]{\glsabbrvsmfont{#1}}
```

`\glsfirstabbrvsmfont` Added for consistent naming.

```
\newcommand*{\glsfirstabbrvsmfont}{\glxtrfirstsmfont}
```

and for the default short form suffix:

```
\glxtrsmsuffix
  \newcommand*\glxtrabbrvpluralsuffix
```

```
\glxtrsmrevert
  \newcommand*\glxtrsmrevert[1]{\textlarger{#1}}
```

```
long-short-sm
  \newabbreviationstyle{long-short-sm}%
  {%
```

Set accessibility attributes if enabled.

```
\glxtrAccSuppAbbrSetFirstLongAttrs\glscategorylabel
```

Setup the default fields.

```
\renewcommand*\CustomAbbreviationFields{%

2.5 Predefined Styles (User Parentheses Hook)

These styles allow the user to adjust the parenthetical forms. These styles all test for the existence of the field given by:

`\glsxtruserfield` Default is the `useri` field.

```
\newcommand*{\glsxtruserfield}{useri}
```

`\glsxtruserparens` Separator used inside parenthetical content.

```
\newcommand*{\glsxtruserparens}{, }
```

`\glsxtruserfieldfmt` Used to format the value of the field given by `\glsxtruserfield`.

```
\newcommand*{\glsxtruserfieldfmt}[1]{#1}
```

`\glsxtruserparen` The format of the parenthetical information. The first argument is the long/short form. The second argument is the entry's label. If `\glscurrentfieldvalue` has been defined, then we have at least glossaries v4.23, which makes it easier for the user to adjust this.

```

\ifdef\glscurrentfieldvalue
{
\newcommand*{\glsxtruserparen}[2]{%
\glsxtrfullsep{#2}%
\glsxtrparen
{#1\ifglsattribute{\glsxtruserfield}{#2}%
{\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtruserparens}%
\glsxtruserfieldfmt{\expandafter\glsxtrgenentrytextfmt\expandafter{\glscurrentfieldvalue}}}%
}{}}%
}

```

```

    }%
  }
}
{
  \newcommand*\glsxtruserparen}[2]{%
    \glsxtrfullsep{#2}%
    \glsxtrparen
    {#1\ifglshasfield{\glsxtruserfield}{#2}%
      {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtruserparenssep}%
        \glsxtruserfieldfmt{\expandafter\glsxtrgenentrytextfmt\expandafter{\@glo@thisvalue}}}%
      }{}%
    }%
  }
}

```

`\GLSxtruserparen` As above but converts the user supplied information to all-caps. The first argument should be provided in all-caps if required.

```

\ifdef\glscurrentfieldvalue
{
  \newcommand*\GLSxtruserparen}[2]{%
    \glsxtrfullsep{#2}%
    \glsxtrparen
    {#1\ifglshasfield{\glsxtruserfield}{#2}%
      {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtruserparenssep}%
        \glsxtruserfieldfmt{\expandafter\mfirstucMakeUppercase\expandafter{\expandafter
          \glsxtrgenentrytextfmt\expandafter{\glscurrentfieldvalue}}}%
        }{}%
      }%
    }
}
}
{
  \newcommand*\GLSxtruserparen}[2]{%
    \glsxtrfullsep{#2}%
    \glsxtrparen
    {#1\ifglshasfield{\glsxtruserfield}{#2}%
      {\expandafter\glsxtrgenentrytextfmt\expandafter{\glsxtruserparenssep}%
        \glsxtruserfieldfmt{\expandafter\mfirstucMakeUppercase\expandafter{\expandafter
          \glsxtrgenentrytextfmt\expandafter{\@glo@thisvalue}}}%
        }{}%
      }%
    }
}
}

```

Font used for short form:

```

\glsabbrvuserfont
  \newcommand*\glsabbrvuserfont}[1]{\glsabbrvdefaultfont{#1}}

```

Font used for short form on first use:

`\glsfirstabbrvuserfont`

```
\newcommand*\glsfirstabbrvuserfont[1]{\glsabbrvuserfont{#1}}
```

Font used for long form:

`\glslonguserfont`

```
\newcommand*\glslonguserfont[1]{\glslongdefaultfont{#1}}
```

Font used for long form on first use:

`\glsfirstlonguserfont`

```
\newcommand*\glsfirstlonguserfont[1]{\glslonguserfont{#1}}
```

The default short form suffix:

`\glsxtrusersuffix`

```
\newcommand*\glsxtrusersuffix{\glsxtrabbrvpluralsuffix}
```

Description encapsulator.

`\glsuserdescription` The first argument is the description. The second argument is the label.

```
\newcommand*\glsuserdescription[2]{\glslonguserfont{#1}}
```

`long-short-user`

```
\newabbreviationstyle{long-short-user}{%

2.6 Predefined Styles (Hyphen)

These styles are designed to work with the `markwords` attribute. They check if the inserted material (provided by the final optional argument of commands like `\gls`) starts with a hyphen. If it does, the insert is added to the parenthetical material. Note that commands like `\glsxtrlong` set `\glsinsert` to empty with the entire link-text stored in `\glscustomtext`.

`\glsxtrifhyphenstart` Checks if the argument starts with a hyphen. The argument may be `\glsinsert` so check for that and expand.

```

\newrobustcmd*{\glsxtrifhyphenstart}[3]{%
  \ifx\glsinsert#1\relax
    \expandafter\@glsxtrifhyphenstart#1\relax\relax
    \@endglsxtrifhyphenstart{#2}{#3}%
  \else
    \@glsxtrifhyphenstart#1\relax\relax\@end@glsxtrifhyphenstart{#2}{#3}%
  \fi
}

```

`\@glsxtrifhyphenstart`

```

\def\@glsxtrifhyphenstart#1#2\@endglsxtrifhyphenstart#3#4{%
  \ifx-#1\relax#3\else #4\fi
}

```

```
\glsxtrlonghyphenshort{<label>}{<long>}{<short>}{<insert>}
```

`\glsxtrlonghyphenshort`

The `<long>` and `<short>` arguments may be the plural form. The `<long>` argument may also be the first letter uppercase form. This unfortunately doesn't

fit in with the new `\glxtrshortformat` etc commands, but is retained for backward-compatibility. This means that the inserted part has to have a separate encapsulation for the inner format. The `<long>` and `<short>` arguments will need to include the inner format.

```
\newcommand*{\glxtrlonghyphenshort}[4]{%
```

Grouping is needed to localise the redefinitions.

```
{%
```

If `<insert>` starts with a hyphen, redefine `\glxtrwordsep` to a hyphen. The inserted material is also inserted into the parenthetical part. (The inserted material is grouped as a precautionary measure.) No change is made to `\glxtrwordsep` if `<insert>` doesn't start with a hyphen.

```
\glxtrifhyphenstart{#4}{\let\glxtrwordsep\glxtrwordsephyphen}{}%
\glsfirstlonghyphenfont{#2\ifglxtrininsertinside
  {\glxtrgenentrytextfmt{#4}}\fi}%
\ifglxtrininsertinside\else{\glxtrgenentrytextfmt{#4}}\fi
\glxtrfullsep{#1}%

`\glxtrlonghyphennoshortsort`

```
\newcommand*\glxtrlonghyphennoshortsort{\expandonce\glxtrorgshort}
```

`long-hyphen-noshort-noreg`

It doesn't really make a great deal of sense to have a long-only style that doesn't have a description (unless no glossary is required), but the best course of action here is to use the short form as the name and the long form as the description.

```
\newabbreviationstyle{long-hyphen-noshort-noreg}%
{%
```

Set accessibility attributes if enabled.

```
\glxtrAccSuppAbbrSetNameShortAttrs\glscategorylabel

3 Commands Specific to bib2gls (glossaries-extra-bib2gls.sty)

This package provides additional support for `bib2gls` and is automatically loaded by the `record` option.

```
\NeedsTeXFormat{LaTeX2e}
```

Rollback releases:

```
\DeclareRelease{v1.48}{2021-11-22}{glossaries-extra-bib2gls-2021-11-22.sty}
\DeclareCurrentRelease{v1.54}{2025-01-03}
```

Declare package:

```
\ProvidesPackage{glossaries-extra-bib2gls}[2025/01/03 v1.54 (NLCT)]
```

Provide convenient shortcut commands for predefined glossary types.

```
\printunsrtacronyms
```

```
\ifglsacronym
\providecommand*\printunsrtacronyms[1][]{%
\printunsrtglossary[type=\acronymtype,#1]}%
\fi

```

\glsentrynumberlist
    \renewcommand*{\glsentrynumberlist}[1]{\glsxtrusefield{#1}{location}}

\IfTeXParserLib This is defined by the TEX parser library to behave like \@firstoftwo. May be
used to provide different code in fields that may be interpreted.
    \providecommand{\IfTeXParserLib}[2]{#2}

    The next command is similar but is specifically for bib2gls and won't in
    general be recognised by the TEX parser library if used by other applications
    (such as the converter tools provided with bib2gls).

\IfNotBibGls This is defined by the bib2gls interpreter to behave like \@secondoftwo.
    \providecommand{\IfNotBibGls}[2]{#1}

    These are some convenient macros for use with custom rules.

\glshex
    \newcommand*{\glshex}{\string\u}

\glsapturedgroup
    \newcommand*{\glsapturedgroup}{\string\$}

\glsdashchar Expands to a literal hash character (similar to \glsbackslash)
    \ifdef\glsdashchar
    {}
    {\edef\glsdashchar{\expandafter@gobble\string\#}}

XtrResourceInitEscSequences Protect commands that shouldn't expand in resource options as they have a
special meaning in the context of those options. This command may be added
to the definition of \glsxtrresourceinit.
    \newcommand*{\GlsXtrResourceInitEscSequences}{%

```

`\glsXtrIfHasNonZeroChildCount` For use with bib2gls's save-child-count resource option.

```

\newcommand*{\GlsXtrIfHasNonZeroChildCount}{%
  \ifstar\s@GlsXtrIfHasNonZeroChildCount\@GlsXtrIfHasNonZeroChildCount
}

```

`\GlsXtrIfHasNonZeroChildCount`

```

\newcommand*{\@GlsXtrIfHasNonZeroChildCount}[3]{%
  \@GlsXtrIfFieldNonZero{childcount}{#1}{#2}{#3}%
}

```

`\s@GlsXtrIfHasNonZeroChildCount`

```

\newcommand*{\s@GlsXtrIfHasNonZeroChildCount}[3]{%
  \s@GlsXtrIfFieldNonZero{childcount}{#1}{#2}{#3}%
}

```

`\glsxtrprovidecommand` For use in @preamble, this behaves like `\providecommand` in the document but like `\renewcommand` in bib2gls.

```

\newcommand*{\glsxtrprovidecommand}{\providecommand}

```

`\glsrenewcommand` Like `\renewcommand` but only generates a warning rather than an error if the command isn't defined.

```

\newcommand*{\glsrenewcommand}{\@star@or@long\glsxtr@renewcommand}

```

`\glsxtr@renewcommand`

```
\newcommand*{\glsxtr@renewcommand}[1]{%
\begingroup \escapechar\m@ne\xdef\@gtempa{\string#1}\endgroup
\expandafter\@ifundefined\@gtempa
{%
\GlossariesExtraWarning{can't redefine \noexpand#1(not already defined)}%
}%
\relax
\relax
\let\@ifdefinable\@rc@ifdefinable
\new@command#1%
}
```

`\glsxtr@wrglossarylocation{<wr-loc>}{<page>}`

`\glsxtr@wrglossarylocation`

For use with `indexcounter` and `bib2gls`. This just expands to `<wr-loc>` to allow `\glsnoidxdisplayloc` to obtain the hyperlink target. The page number obtained when `bib2gls` parses the aux file.

```
\newcommand*{\glsxtr@wrglossarylocation}[2]{#1}
```

`\GlsXtrIndexCounterLink{<text>}{<label>}`

`\GlsXtrIndexCounterLink`

For use with `indexcounter` and `bib2gls`.

```
\ifdef\hyperref
{%
\newcommand*{\GlsXtrIndexCounterLink}[2]{%
\glsxtrifhasfield{indexcounter}{#2}%
{\hyperref[wrglossary.\glscurrentfieldvalue]{#1}}%
{#1}%
}
}
{
\newcommand*{\GlsXtrIndexCounterLink}[2]{#1}
}
```

`\GlsXtrDualField`

`\GlsXtrDualField`

The internal field used to store the dual label. The `dual-field` defaults to `dual` if no value is supplied so that's used as the default.

```
\newcommand*{\GlsXtrDualField}{dual}
```

`\GlsXtrDualBackLink{<text>}{<label>}`

`\GlsXtrDualBackLink`

Adds a hyperlink to the dual entry.

```
\newcommand*{\GlsXtrDualBackLink}[2]{%
  \glstrifhasfield{\GlsXtrDualField}{#2}%
  {\glshyperlink[#1]{\glscurrentfieldvalue}}%
  {#1}%
}
```

`\GlsXtrBibTeXEntryAliases` Convenient shortcut for use with entry-type-aliases to alias standard BIB_T_E_X entry types to @bibtexentry.

```
\newcommand*{\GlsXtrBibTeXEntryAliases}{%
  article=bibtexentry,
  book=bibtexentry,
  booklet=bibtexentry,
  conference=bibtexentry,
  inbook=bibtexentry,
  incollection=bibtexentry,
  inproceedings=bibtexentry,
  manual=bibtexentry,
  mastersthesis=bibtexentry,
  misc=bibtexentry,
  phdthesis=bibtexentry,
  proceedings=bibtexentry,
  techreport=bibtexentry,
  unpublished=bibtexentry
}
```

`\GlsXtrProvideBibTeXFields` Convenient shortcut to define the standard BIB_T_E_X fields.

```
\newcommand*{\GlsXtrProvideBibTeXFields}{%
  \glsaddstoragekey{address}{\glstrbibaddress}%
  \glsaddstoragekey{author}{\glstrbibauthor}%
  \glsaddstoragekey{booktitle}{\glstrbibbooktitle}%
  \glsaddstoragekey{chapter}{\glstrbibchapter}%
  \glsaddstoragekey{edition}{\glstrbibedition}%
  \glsaddstoragekey{howpublished}{\glstrbibhowpublished}%
  \glsaddstoragekey{institution}{\glstrbibinstitution}%
  \glsaddstoragekey{journal}{\glstrbibjournal}%
  \glsaddstoragekey{month}{\glstrbibmonth}%
  \glsaddstoragekey{note}{\glstrbibnote}%
  \glsaddstoragekey{number}{\glstrbibnumber}%
  \glsaddstoragekey{organization}{\glstrbiborganization}%
  \glsaddstoragekey{pages}{\glstrbibpages}%
  \glsaddstoragekey{publisher}{\glstrbibpublisher}%
  \glsaddstoragekey{school}{\glstrbibschooll}%
  \glsaddstoragekey{series}{\glstrbibseries}%
  \glsaddstoragekey{title}{\glstrbibtitle}%
  \glsaddstoragekey{bibtex-type}{\glstrbibtype}%
  \glsaddstoragekey{volume}{\glstrbibvolume}%
}
```

Multiple supplementary references are only supported with bib2gls.

`\glxtrmultisupplocation` This is like `\glxtrsupphypernumber` but the second argument is the external file name (which isn't obtained from the `externallocation` attribute). The third argument is the formatting (encap) control sequence *name*. This is ignored by default, but is set by `bib2gls` to the original encap in case it's required.

```
\newcommand*\glxtrmultisupplocation}[3]{%
  {%
    \def\glxtrsupplocationurl{#2}%
    \glshypernumber{#1}%
  }%
}
```

```
\glxtrdisplaysupploc{<prefix>}{<counter>}{<format>}{<src>}
{<location>}
```

`\glxtrdisplaysupploc`

This is like `\glsnoidxdisplayloc` but is used for supplementary locations and so requires an extra argument.

```
\newcommand*\glxtrdisplaysupploc[5]{%
  \setentrycounter[#1]{#2}%
  \glxtrmultisupplocation{#5}{#4}{#3}%
}
```

`\glxtr@setlocationanchor`

```
\ExplSyntaxOn
\cs_new:Npn \glxtr@setlocationanchor #1 #2
{
  \group_begin:
  \glswrglossdisableanchorcmds
  \exp_args:NNNe
  \group_end:
  \tl_set:Nn #1 { \text_purify:n { #2 } }
}
\ExplSyntaxOff
```

`\glxtrdisplaylocnameref` `\glxtrdisplaylocnameref{<prefix>}{<counter>}{<format>}{<location>}{<name>}{<href>}{<hcounter>}{<external file>}` Used with the `[nameref]record` package option. The `<href>` argument was obtained from `\@currentHref` and the `<hcounter>` argument was obtained from `\theHentrycounter`, which is more reliable. If `hyperref` hasn't been loaded, this just behaves like `\glsnoidxdisplayloc`.

```
\ifundef\hyperlink
{
  \newcommand*\glxtrdisplaylocnameref}[8]{%
    \glsnoidxdisplayloc{#1}{#2}{#3}{#4}%
  }
}
{
```

Default action uses `<hcounter>`. Equations and pages typically don't have a title, so check the counter name (otherwise the title may be the section or

chapter title, which can be confusing). As from v1.42, this now checks if the control sequence `\glsxtr<counter>locfmt` is defined. The prefix argument is redundant.

```
\newcommand*\glsxtrdisplaylocnameref}[8]{%
  \def\glsxtrrecentanchor{#6}%
  \glsxtr@setlocationanchor\glsxtrlocationanchor{#2.#7}%
```

Initialise `\glsxtractualanchor`:

```
\let\glsxtractualanchor\glsxtrlocationanchor
\glsxtrsetactualanchor{#2}%
\ifcsdef{glsxtr#2locfmt}%
  {\glsxtrnamerefink{#3}{\csuse{glsxtr#2locfmt}{#4}{#5}}{\glsxtractualanchor}{#8}}%
  {%
    \ifstrempy{#5}%
    {%
```

No title, so just use the location as the link text.

```
  \glsxtrnamerefink{#3}{#4}{\glsxtractualanchor}{#8}%
  }%
  {%
    \ifstrequal{#2}{page}%
    {\glsxtrnamerefink{#3}{#4}{\glsxtractualanchor}{#8}}%
    {\glsxtrtitlednamerefink{#3}{#4}{#5}{#8}}%
  }%
}%
}
```

`\glsxtractualanchor` Does nothing by default. May be redefined to override the default.

```
\newcommand{\glsxtrsetactualanchor}[1]{}
```

```
\glsxtrtitlednamerefink{<format>}{<location>}{<title>}
  {<file>}
```

`\glsxtrtitlednamerefink`

```
\newcommand{\glsxtrtitlednamerefink}[4]{%
  \glsxtrnamerefink{#1}{#2}{\glsxtrrecentanchor}{#4}%
}
```

```
\glsxtrequationlocfmt{<location>}{<title>}
```

`\glsxtrequationlocfmt`

```
\newcommand*\glsxtrequationlocfmt}[2]{(#1)}
```

```
\glsxtrwrglossarylocfmt{<location>}{<title>}
```

`\glsxtrwrglossarylocfmt`

```

\newcommand*\glxtrwrglossarylocfmt}[2]{%
  {\@@glxtrwrglosscountermark{#1}%
  \let\glxtr@wrglossarylocation\@secondoftwo
  #1}%
}

```

```

\glxtrnamerefink{<format>}{<title>}{<href>}{<external
file>}

```

\glxtrnamerefink

```

\newcommand*\glxtrnamerefink}[4]{%

```

Locally change \glshypernumber to \@firstofone to remove the normal location hyperlink.

```

\begingroup
\let\glshypernumber\@firstofone

```

If the *<external file>* argument is empty, an internal link is used, otherwise an external one is needed.

```

\ifstrempy{#4}%
{\glxtrfmtinternalnameref{#3}{#1}{#2}}%
{\glxtrfmtexternalnameref{#3}{#1}{#2}{#4}}%
\endgroup
}

```

```

\glxtrnameloclink{<prefix>}{<counter>}{<format>}
{<location>}{<text>}{<external
file>}

```

\glxtrnameloclink

Like \@gls@numberlink, this creates a hyperlink to the target obtained from the prefix, counter and location but uses *<text>* as the hyperlink text. As with regular indexing, this will fail if the target name can't be formed by prefixing the location value.

```

\newcommand*\glxtrnameloclink}[6]{%

\glsxtrSetWidestFallback{<max depth>}{<list>}
```

`\glsxtrSetWidestFallback`

Used when `bib2gls` can't determine the widest name. The `<list>` argument is a comma-separated list of glossary labels. The `<max depth>` refers to the maximum hierarchical depth. This will either be 0 (only top-level entries) or 2 (up to two child-levels).

```

```
\newcommand*\glxtrifinlabelprefixlist[3]{%
  \ifstrempy{#1}%
  {\glxtrifinlabelprefixlist{\empty}{#2}{#3}}%
  {%
    \DTLifinlist{#1}{\@glxtr@labelprefixes}{#2}{#3}%
  }%
}
```

`\@glxtr@prefixlabellist` This is provided for the benefit of `bib2gls`. It's possible that the user may add more prefixes after the start of the document, but that can lead to inconsistencies. The final element of the list (the fallback) is the only prefix of interest for `bib2gls`.

```
\AtBeginDocument{%
  \protected@write\@auxout{}\string\providecommand{\string\@glxtr@prefixlabellist}[1]{}%
  \protected@write\@auxout{}\string\@glxtr@prefixlabellist{\@glxtr@labelprefixes}%
}
```

Before v1.49, the last label was used as a fallback, but this doesn't make sense when the first matching label is used when entries are defined. The selection should be deferred to `bib2gls`, which means passing the list of label choices to `bib2gls`.

`\@glxtr@dglsnomatch` No match found so record all possibilities. Requires `bib2gls v3.0+`. This will add the final insert argument but won't be able to apply any case-changing etc.

```
\def\@glxtr@dglsnomatch#1#2[#3]{%
  \begingroup
```

This is a cut-down version of `\@glxtr@record`. Use the fallback label in the event any hooks have to reference `\glslabel`. This is mainly to prevent an undefined control sequence error. It can't be relied on as the actual label.

Multi (compound/combined) entry commands used by bib2gls.

```
\glsxtrmultientryadjustedname{list1}{name}{list2}
{label}
```

\glsxtrmultientryadjustedname

This command is used by bib2gls when it adjusts the name field of an entry that's been identified as a main entry in the multi-entry set *label*.

The final argument *label* is the multi-entry label from which the set was obtained. The first argument *list1* is the list of other labels that come before the main label. The third argument *list2* is the remaining list of other labels. The *name* argument is the previous name before adjustment.

Provide missing Greek letters for use in maths mode. These commands are recognised by `bib2gls` and will be mapped to the Mathematical Greek Italic letters. This ensures that the Greek letters that have the same shape as Latin letters are kept with the other mathematical Greek letters for sorting purposes. The \LaTeX version of these commands (provided here) use an upright font for capitals and italic for lower case to provide a better match with the other Greek symbols provided by the kernel.

This package provides some basic rules, but it's not intended for complete coverage of all locales. The CLDR should provide the appropriate locale-sensitive rules. These macros are primarily to help construct custom rules to include, for example, Greek maths symbols mixed with Latin. For the full rule syntax, see the Java API for [RuleBaseCollator](#)

If you want to provide a rule-block for a particular locale to allow for customization within that locale, create a file called `glossariesxtr-tag.ldf` (where *tag* identifies the locale) and add similar commands. See the description of `\IfTrackedLanguageFileExists` in the `tracklang` manual for the allowed forms of *tag*. The simplest is to just use the root language label or ISO code. The file will then be automatically loaded by `glossaries-extra` if the document has support for that language.

When combining these blocks of rules, remember to separate them with the appropriate character. For example:

```

%sort-rule={\glsxtrcontrolrules
% ;\glsxtrspacerules
% ;\glsxtrnonprintablerules
% ;\glsxtrcombiningdiacriticrules
% ;\glsxtrhyphenrules
% <\glsxtrgeneralpuncrules
% <\glsxtrdigitrules
% <\glsxtrfractionrules
% <\glsxtrGeneralLatinIVrules
% <\glsxtrMathItalicGreekIrules
%}
%
```

`\glxtrIgnorableRules` A shortcut command for common ignorable characters.

```
\newcommand{\glxtrIgnorableRules}{%
\glxtrcontrolrules
\string;\glxtrspacerules
\string;\glxtrnonprintablerules
}
```

`\glxtrGeneralInitRules` A shortcut command for common initial rules for ignorables, diacritics, punctuation and digits.

```
\newcommand{\glxtrGeneralInitRules}{%
\glxtrIgnorableRules
\string;\glxtrcombiningdiacriticrules
\string;\glxtrhyphenrules
\string<\glxtrgeneralpuncrules
\string<\glxtrdigitrules
\string<\glxtrfractionrules
}
```

`\glxtrcontrolrules` These are control characters that are usually placed at the start of a rule in the ‘ignored characters’ section. These control characters are unlikely to appear in any entry fields but are provided for completeness. (They may appear with the marker commands provided with `--datatool-sort-markers` which emulates the marker commands provided by `datatool-base` for use in the sort hook, in which case those particular control codes shouldn’t be ignored.) `\string` is used for punctuation characters in case they’ve been made active.

```

}

```

`\@glxtrdialecthook` Check for scripts associated with the document dialects.

```

\renewcommand{\@glxtrdialecthook}{%
\ifundef\CurrentTrackedScript
{%
\TrackLangIfHasDefaultScript{\CurrentTrackedLanguage}%
}%
\edef\CurrentTrackedScript{%
\TrackLangGetDefaultScript\CurrentTrackedLanguage}%
}%
}%
}%
\ifdef\CurrentTrackedScript
{%
\let\gls@orgTrackLangRequireDialectPrefix\TrackLangRequireDialectPrefix
\def\TrackLangRequireDialectPrefix{glossariesxtr-}%
\let\CurrentTrackedTag\CurrentTrackedScript
\IfFileExists{\TrackLangRequireDialectPrefix\CurrentTrackedTag.ldf}
{\RequireGlossariesExtraLang{\CurrentTrackedTag}}%
}%
\let\TrackLangRequireDialectPrefix\gls@orgTrackLangRequireDialectPrefix
}%

```

```

    {}%
  }

```

If `\glsxtr@loaddialect` has been defined, then `glossaries-extra-bib2gls` has been loaded after `glossaries-extra`. (For example, through `\glossariesextrasetup`.) Not recommended, but if this has been done try to find the associated language resources.

```

\ifdef\glsxtr@loaddialect
{%
  \ifpackageloaded{tracklang}
  {%
    \AnyTrackedLanguages
    {%
      \ForEachTrackedDialect{\this@dialect}{\glsxtr@loaddialect}%
    }%
  }%
}
{}
}
{}

```

4 Style Adjustments (`glossaries-extra-stylemods.sty`)

This package adjusts the predefined styles so that they include the post description hook. Also, some other minor adjustments may be made to make existing styles more flexible.

4.1 Package Initialisation

First identify package:

```
\NeedsTeXFormat{LaTeX2e}
```

Rollback releases:

```
\DeclareRelease{v1.48}{2021-11-22}{glossaries-extra-stylemods-2021-11-22.sty}
\DeclareCurrentRelease{v1.54}{2025-01-03}
```

Declare package:

```
\ProvidesPackage{glossaries-extra-stylemods}[2025/01/03 v1.54 (NLCT)]
```

Provide package options to automatically load required predefined styles. The simplest method is to just test for the existence of the file `glossary-⟨option⟩.sty`. Packages can't be loaded whilst the options are being processed, so save the list in `\@glsxtr@loadstyles`.

```
\@glsxtr@loadstyles
```

```
\newcommand*{\@glsxtr@loadstyles}{}
```

`all` Provide all known styles.

```
\DeclareOption{all}{%
```

```

\appto\@glsxtr@loadstyles{%
  \RequirePackage{glossary-inline}%
  \RequirePackage{glossary-list}%
  \RequirePackage{glossary-tree}%
  \RequirePackage{glossary-mcols}%
  \RequirePackage{glossary-long}%
  \RequirePackage{glossary-longragged}%
  \RequirePackage{glossary-longbooktabs}%
  \RequirePackage{glossary-super}%
  \RequirePackage{glossary-superragged}%
  \RequirePackage{glossary-bookindex}%
  \RequirePackage{glossary-longextra}%
  \RequirePackage{glossary-topic}%
  \RequirePackage{glossary-table}%
}
}
\DeclareOption*{%
  \IfFileExists{glossary-\CurrentOption.sty}
  {\eappto\@glsxtr@loadstyles{%
    \noexpand\RequirePackage{glossary-\CurrentOption}}%
  }%
  {%
    \PackageError{glossaries-extra-styles}%
    {Unknown option ‘\CurrentOption’}{}%
  }%
}

```

Process the package options:

```
\ProcessOptions
```

Load the required packages:

```
\@glsxtr@loadstyles
```

Adjust the styles so that they all have the post description hook. Also, instead of having a hard-coded `\space` before the location, use:

```
\glsxtrprelocation
```

This uses `\providecommand` as the same command is also provided by `glossary-bookindex`.

```
\providecommand*{\glsxtrprelocation}{\space}
```

In case we have an old version of `glossaries`:

```
\renewglossarystyle
```

```

\providecommand{\renewglossarystyle}[2]{%
  \ifcsundef{@glsstyle@#1}%
  {%
    \PackageError{glossaries-extra}{Glossary style ‘#1’ isn’t already defined}{}%
  }%
  {%
    \csdef{@glsstyle@#1}{#2}%
  }%
}

```

4.2 List-Like Styles

The list-like styles mostly already use the post description hook. Only the `listdotted` style need modifying to add this.

```
\ifdef{\@glsstyle@listdotted}
{%
  \renewglossarystyle{listdotted}{%
    \setglossarystyle{list}%
    \renewcommand*{\glossentry}[2]{%
      \item[]\makebox[\glslistdottedwidth][l]{%
        \glentryitem{##1}%
        \glstarget{##1}{\glossentryname{##1}}%
        \unskip\leaders\hbox to 2.9mm{\hss.}\hfill\strut}%
        \glossentrydesc{##1}\glspostdescription}%
      \renewcommand*{\subglossentry}[3]{%
        \item[]\makebox[\glslistdottedwidth][l]{%
          \glssubentryitem{##2}%
          \glstarget{##2}{\glossentryname{##2}}%
          \unskip\leaders\hbox to 2.9mm{\hss.}\hfill\strut}%
          \glossentrydesc{##2}\glspostdescription}%
        }
      }
    }
  }
}
```

Assume the style isn't required if it hasn't already been defined.

```
}
```

The `sublistdotted` style doesn't display the description for top-level entries. Sub-level entries use the `listdottedstyle`.

The other list styles would be easier to adapt if the space before the number list wasn't hard coded.

```
\ifdef{\@glsstyle@list}
{%
```

`\glslistprelocation` Space before number list for top-level entries.

```
\newcommand{\glslistprelocation}{\glsxtrprelocation}
```

`\glslistchildprelocation` Space before number list for child entries.

```
\newcommand{\glslistchildprelocation}{\glslistprelocation}
```

`\glslistchildpostlocation` Full stop after number list.

```
\newcommand{\glslistchildpostlocation}{.}
```

`\glslistdesc`

```
\newcommand{\glslistdesc}[1]{\glossentrydesc{##1}\glspostdescription}
```

`\glslistgroupskip`

```
\newcommand{\glslistgroupskip}{\nobreak\indexspace\nobreak}
```

```

\glslistitem
    \newcommand{\glslistitem}[1]{%
        \item[\glsentryitem{#1}%
            \glstarget{#1}{\glossentryname{#1}}}%
    }

```

`\glslistinit` This command was only added to glossary-list v4.48 so provide it if it hasn't been defined:

```

\providecommand{\glslistinit}{%
    \ifdef\GetTitleStringDisableCommands
    {%
        \GetTitleStringSetup{expand}%
        \GetTitleStringDisableCommands{%
            \let\glsentryitem@gobble
            \let\glstarget@secondoftwo
            \let\glossentryname\glslistexpandedname
            \let\glslistgroupheaderfmt@firstofone
            \let\glsgetgrouptitle@firstofone

```

Technically this has an optional argument but it's not used in the list styles.

```

            \let\glsnavhypertarget@secondoftwo
            \let\glsnavigation\relax
        }%
    }%
    {}%
}

```

`\glslistexpandedname` This command was only added to glossary-list v4.48 so provide it if it hasn't been defined. The original definition uses `\glsunexpandedfieldvalue` which was added to glossaries v4.48 (so if `\glslistexpandedname` hasn't been defined then neither will `\glsunexpandedfieldvalue`).

```

\providecommand{\glslistexpandedname}[1]{%
    \ifcsname glo@\glsdetoklabel{#1}@name\endcsname
    \expandafter\expandonce\csname glo@\glsdetoklabel{#1}@name\expandafter\endcsname
    \fi
}

```

Redefine list to use these commands.

```

\renewglossarystyle{list}{%
    \renewenvironment{theglossary}{%
        {\glslistinit\begin{description}}{\end{description}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand*{\glsgroupheading}[1]{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the list styles.

```

    \renewcommand*{\glssubgroupheading}[4]{}%
    \renewcommand*{\glossentry}[2]{%
        \glslistitem{##1}\glslistdesc{##1}\glslistprelocation ##2}%

```

```

\renewcommand*\subglossentry}[3]{%
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\space
  \glslistdesc{##2}%
  \glslistchildprelocation ##3\glslistchildpostlocation}%
\renewcommand*\glsgroupskip{\ifglsnogroupskip\else\glslistgroupskip\fi}%
}
}
{}

```

Similarly for altlist. Since it requires list, the new commands should have been defined above.

```

\ifdef{\@glsstyle@altlist}
{%

```

`\glsaltlistitem`

```

\newcommand{\glsaltlistitem}[1]{%
  \glslistitem{#1}%
  \mbox{}\par\nobreak\@afterheading
}

\renewglossarystyle{altlist}{%
  \setglossarystyle{list}%
  \renewcommand*\glossentry}[2]{%
    \glsaltlistitem{##1}%
    \glslistdesc{##1}\glslistprelocation ##2}%
  \renewcommand*\subglossentry}[3]{%
    \par
    \glssubentryitem{##2}%
    \glstarget{##2}{\strut}\glslistdesc{##2}%
    \glslistchildprelocation ##3}%
}
}
{}

```

Redefine listgroup so that it discourages a break after group headings.

```

\ifdef{\@glsstyle@listgroup}
{%

```

`\glslistgroupheaderitem`

```

\newcommand{\glslistgroupheaderitem}[2]{\item[#{#2}]}

```

`\glslistgroupafterheader`

```

\newcommand{\glslistgroupafterheader}{%
  \mbox{}\par\nobreak\@afterheading
}

\renewglossarystyle{listgroup}{%
  \setglossarystyle{list}%
  \renewcommand*\glsgroupheading}[1]{%

```

```

        \glslistgroupheaderitem{##1}{\glslistgroupheaderfmt{\glsgetgrouptitle{##1}}}%
        \glslistgroupafterheader
    }%
}
}
{}

```

Similarly for listhypergroup.

```

\ifdef{\@glsstyle@listhypergroup}
{
  \renewglossarystyle{listhypergroup}{%
    \setglossarystyle{list}%
    \renewcommand*\glossaryheader{%
      \glslistnavigationitem{\glsnavigation}}%
    \renewcommand*\glsgroupheading}[1]{%
      \glslistgroupheaderitem{##1}{\glslistgroupheaderfmt
        {\glsnavhypertarget{##1}{\glsgetgrouptitle{##1}}}}%
      \glslistgroupafterheader
    }%
  }
}
}
{}

```

Similarly for altlistgroup.

```

\ifdef{\@glsstyle@altlistgroup}
{
  \renewglossarystyle{altlistgroup}{%
    \setglossarystyle{altlist}%
    \renewcommand*\glsgroupheading}[1]{%
      \glslistgroupheaderitem{##1}%
      {\glslistgroupheaderfmt{\glsgetgrouptitle{##1}}}%
      \glslistgroupafterheader
    }%
  }
}
}
{}

```

Similarly for altlisthypergroup.

```

\ifdef{\@glsstyle@altlisthypergroup}
{
  \renewglossarystyle{altlisthypergroup}{%
    \setglossarystyle{altlist}%
    \renewcommand*\glossaryheader{%
      \glslistnavigationitem{\glsnavigation}}%
    \renewcommand*\glsgroupheading}[1]{%
      \glslistgroupheaderitem{##1}{\glslistgroupheaderfmt
        {\glsnavhypertarget{##1}{\glsgetgrouptitle{##1}}}}%
      \glslistgroupafterheader
    }%
  }
}
}

```

```
{}
```

4.3 Longtable Styles

The three and four column styles require adjustment to add the post-description hook. The two column styles need the hard-coded `\space` changed to `\glstrprelocation`.

```
\ifcsdef{@glsstyle@long}
{%
  \renewglossarystyle{long}{%
    \renewenvironment{theglossary}%
      {\begin{longtable}{lp{\glsdescwidth}}}%
      {\end{longtable}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand*{\glsgroupheading}[1]{}%
  }
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the long styles.

```
\renewcommand*{\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
  \glssentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription
  \glstrprelocation ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription
  \glstrprelocation ##3\tabularnewline
}%
\ifglsnogroupskip
  \renewcommand*{\glsgroupskip}{}%
\else
  \renewcommand*{\glsgroupskip}{ & \tabularnewline}%
\fi
}
}
```

Three column style:

```
\ifcsdef{@glsstyle@long3col}
{%
  \renewglossarystyle{long3col}{%
    \renewenvironment{theglossary}%
      {\begin{longtable}{lp{\glsdescwidth}p{\glspagerlistwidth}}}%
      {\end{longtable}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand*{\glsgroupheading}[1]{}%
  }
```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the long styles.

```

\renewcommand*\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
  \glstryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription & ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  ##3\tabularnewline
}%

```

Conditional needs to be outside of `\glsgroupskip` otherwise it can cause “Incomplete `\iftrue`” errors.

```

\ifglsgroupskip
  \renewcommand*\glsgroupskip}{}%
\else
  \renewcommand*\glsgroupskip}{& \tabularnewline}%
\fi
}
}
{}

```

Four column style:

```

\ifcsdef{@glsstyle@long4col}
{%
  \renewglossarystyle{long4col}{%
    \renewenvironment{theglossary}%
      {\begin{longtable}{llll}}%
      {\end{longtable}}%
    \renewcommand*\glossaryheader}{}%
    \renewcommand*\glsgroupheading}[1]{}%
  }
}

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the long styles.

```

\renewcommand*\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
  \glstryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription &
  \glossentrysymbol{##1} &
  ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  \glossentrysymbol{##2} & ##3\tabularnewline
}%

```

```

\ifglsnogroupskip
\renewcommand*\glsgroupskip}{}%
\else
\renewcommand*\glsgroupskip}{& & \tabularnewline}%
\fi
}
}
{}

```

The styles in `glossary-longbooktabs` are all based on the styles in `glossary-long`, so no adjustments are needed for that package.

4.4 Long Ragged Styles

The three and four column styles require adjustment for the post-description hook, but not the two column styles. However, the two-column styles need to have `\space` replaced with `\glxtrprelocation`.

```

\ifcsdef{@glstyle@longragged}
{%
\renewglossarystyle{longragged}{%
\renewenvironment{theglossary}%
{\begin{longtable}{l>{\raggedright}p{\glstdescwidth}}}%
{\end{longtable}}}%
\renewcommand*\glossaryheader}{}%
\renewcommand*\glsgroupheading}[1]{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the longragged styles.

```

\renewcommand*\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
\glstarget{##1}\glstarget{##1}{\glossentryname{##1}} &
\glossentrydesc{##1}\glspostdescription\glxtrprelocation ##2%
\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
&
\glssubentryitem{##2}%
\glstarget{##2}{\strut}\glossentrydesc{##2}%
\glspostdescription\glxtrprelocation ##3%
\tabularnewline
}%
\ifglsnogroupskip
\renewcommand*\glsgroupskip}{}%
\else
\renewcommand*\glsgroupskip}{ & \tabularnewline}%
\fi
}
}
{}

```

Three and four column styles don't use `\glstrprelocation` since the number list is in its own column.

```
\ifcsdef{@glsstyle@longragged3col}
{%
  \renewglossarystyle{longragged3col}{%
    \renewenvironment{theglossary}%
      {\begin{longtable}{1>{\raggedright}p{\glsdescwidth}%
        >{\raggedright}p{\glspagelistwidth}}}%
      {\end{longtable}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand*{\glsgroupheading}[1]{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the longragged styles.

```
\renewcommand*{\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription & ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  ##3\tabularnewline
}%

\ifglsgroupskip
  \renewcommand*{\glsgroupskip}{}%
\else
  \renewcommand*{\glsgroupskip}{& \tabularnewline}%
\fi
}
}
}
```

Four column style:

```
\ifcsdef{@glsstyle@altlongragged4col}
{%
  \renewglossarystyle{altlongragged4col}{%
    \renewenvironment{theglossary}%
      {\begin{longtable}{1>{\raggedright}p{\glsdescwidth}1%
        >{\raggedright}p{\glspagelistwidth}}}%
      {\end{longtable}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand*{\glsgroupheading}[1]{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the longragged styles.

```
\renewcommand*{\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
  \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
```

```

        \glossentrydesc{##1}\glspostdescription & \glossentrysymbol{##1} &
        ##2\tabularnewline
    }%
\renewcommand{\subglossentry}[3]{%
    &
    \glssubentryitem{##2}%
    \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
    \glossentrysymbol{##2} & ##3\tabularnewline
}%

\ifglsnogroupskip
    \renewcommand*\glsgroupskip}{}%
\else
    \renewcommand*\glsgroupskip}{& & \tabularnewline}%
\fi
}
}
{}

```

4.5 Supertabular Styles

The three and four column styles require adjustment to add the post-description hook. The two column styles need the hard-coded `\space` changed to `\glxtrprelocation`.

```

\ifcsdef{@glstyle@super}
{
    \renewglossarystyle{super}{%
        \renewenvironment{theglossary}%
            {\tablehead{}\tabletail}{%
                \begin{supertabular}{lp{\glstdescwidth}}}%
            {\end{supertabular}}%
        \renewcommand*\glossaryheader}{}%
        \renewcommand*\glsgroupheading}[1]{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

\renewcommand*\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
    \glssubentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
    \glossentrydesc{##1}\glspostdescription
    \glxtrprelocation ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
    &
    \glssubentryitem{##2}%
    \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription
    \glxtrprelocation ##3\tabularnewline
}%
\ifglsnogroupskip
    \renewcommand*\glsgroupskip}{}%

```

```

        \else
        \renewcommand*{\glsgroupskip}{& \tabularnewline}%
        \fi
    }
}
{}

```

Three column style:

```

\ifcsdef{@glsstyle@super3col}
{%
  \renewglossarystyle{super3col}{%
    \renewenvironment{theglossary}%
      {\tablehead{}}\tabletail{}}%
    \begin{supertabular}[lp{\glsdescwidth}p{\glspagelistwidth}]{}%
      {\end{supertabular}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand*{\glsgroupheading}[1]{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

  \renewcommand*{\gls subgroupheading}[4]{}%
  \renewcommand{\glossentry}[2]{%
    \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
    \glossentrydesc{##1}\glspostdescription & ##2\tabularnewline
  }%
  \renewcommand{\subglossentry}[3]{%
    &
    \gls subentryitem{##2}%
    \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
    ##3\tabularnewline
  }%

  \ifglsnogroupskip
  \renewcommand*{\gls groupskip}{}%
  \else
  \renewcommand*{\gls groupskip}{ & \tabularnewline}%
  \fi
}
}
{}

```

Four column styles:

```

\ifcsdef{@glsstyle@super4col}
{%
  \renewglossarystyle{super4col}{%
    \renewenvironment{theglossary}%
      {\tablehead{}}\tabletail{}}%
    \begin{supertabular}{l1111}{}%
      \end{supertabular}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand*{\gls groupheading}[1]{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

\renewcommand*\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
  \glstryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription &
  \glossentrysymbol{##1} & ##2\tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &
  \glssubentryitem{##2}%
  \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
  \glossentrysymbol{##2} & ##3\tabularnewline
}%

\ifglsnogroupskip
  \renewcommand*\glsgroupskip}{}%
\else
  \renewcommand*\glsgroupskip}{& & \tabularnewline}%
\fi
}
}
{}

```

4.6 Super Ragged Styles

The three and four column styles require adjustment for the post-description hook, but not the two column styles. However, the two-column styles need to have `\space` replaced with `\glxtrprelocation`.

```

\ifcsdef{@glstyle@superragged}
{%
  \renewglossarystyle{superragged}{%
    \renewenvironment{theglossary}%
      {\tablehead}{\tabletail}{%
        \begin{supertabular}{1>{\raggedright}p{\glstdescwidth}}%
        {\end{supertabular}}%
      }
    \renewcommand*\glossaryheader}{}%
    \renewcommand*\glsgroupheading}[1]{}%
  }
}

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

\renewcommand*\glssubgroupheading}[4]{}%
\renewcommand{\glossentry}[2]{%
  \glstryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
  \glossentrydesc{##1}\glspostdescription\glxtrprelocation ##2%
  \tabularnewline
}%
\renewcommand{\subglossentry}[3]{%
  &

```

```

        \glssubentryitem{##2}%
        \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription
        \glstrprelocation ##3%
        \tabularnewline
    }%
    \ifglsgroupskip
        \renewcommand*\glsgroupskip{}{}%
    \else
        \renewcommand*\glsgroupskip{& \tabularnewline}%
    \fi
}
}
{}

```

Three column style:

```

\ifcsdef{@glsstyle@superragged3col}
{%
    \renewglossarystyle{superragged3col}{%
        \renewenvironment{theglossary}%
            {\tablehead{}}\tabletail{}}%
        \begin{supertabular}[1>{\raggedright}p{\glsdescwidth}%
            >{\raggedright}p{\glspagelistwidth}]}%
            {\end{supertabular}}%
        \renewcommand*\glossaryheader{}{}%
        \renewcommand*\glsgroupheading[1]{}{}%

```

Sub-groups are only supported with `\printunsrtglossary`. This does nothing as the sub-entries don't have the name displayed for the super styles.

```

    \renewcommand*\gls subgroupheading}[4]{}%
    \renewcommand{\glossentry}[2]{%
        \glssubentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
        \glossentrydesc{##1}\glspostdescription &
        ##2\tabularnewline
    }%
    \renewcommand{\subglossentry}[3]{%
        &
        \glssubentryitem{##2}%
        \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
        ##3\tabularnewline
    }%

    \ifglsgroupskip
        \renewcommand*\glsgroupskip{}{}%
    \else
        \renewcommand*\glsgroupskip{& &\tabularnewline}%
    \fi
}
}
{}

```

Four columns:

```

\ifcsdef{@glsstyle@altsuperragged4col}
{%
  \renewglossarystyle{altsuperragged4col}{%
    \renewenvironment{theglossary}%
      {\tablehead{}}\tabletail{}}%
      \begin{supertabular}[1>{\raggedright}p{\glsdescwidth}1%
        >{\raggedright}p{\glspagelistwidth}}}%
      {\end{supertabular}}%
    \renewcommand*{\glossaryheader}{}%
    \renewcommand{\glossentry}[2]{%
      \glsentryitem{##1}\glstarget{##1}{\glossentryname{##1}} &
      \glossentrydesc{##1}\glspostdescription &
      \glossentrysymbol{##1} & ##2\tabularnewline
    }%
    \renewcommand{\subglossentry}[3]{%
      &
      \glsentryitem{##2}%
      \glstarget{##2}{\strut}\glossentrydesc{##2}\glspostdescription &
      \glossentrysymbol{##2} & ##3\tabularnewline
    }%

    \ifglsnogroupskip
      \renewcommand*{\glsgroupskip}{}%
    \else
      \renewcommand*{\glsgroupskip}{& & \tabularnewline}%
    \fi
  }
}
{}

```

4.7 Inline Style

The inline style is dealt with slightly differently. The `\glspostdescription` hook is actually in `\glspostinline`, which is called at the end of the glossary. The original definition of `\glspostinline` also includes a space, which is unnecessary. Here, instead of redefining the inline style, just redefine `\glspostinline` and `\glsinlinedescformat`.

```

\ifdef{@glsstyle@inline}
{%
  \renewcommand*{\glspostinline}{.\spacefactor\sfcode{\.}}

```

Just use `\glsxtrpostdescription` instead of `\glspostdescription`.

```

  \renewcommand*{\glsinlinedescformat}[3]{%
    \space#1\glsxtrpostdescription}
  \renewcommand*{\glsinlinesubdescformat}[3]{%
    #1\glsxtrpostdescription}

```

The default settings don't show the location lists, so there's no adjustment for `\glsxtrprelocation`.

```

}

```

```
{}
```

4.8 Tree Styles

Redefine both `\glstreenamefmt` and `\glstreegroupheaderfmt` in terms of `\glstreedefaultnamefmt` to make it easier to change both at the same time or only change one without affecting the other.

```
\ifdef\glstreenamefmt  
{
```

```
\glstreedefaultnamefmt
```

```
\newcommand{\glstreedefaultnamefmt}[1]{\textbf{#1}}
```

```
\glstreenamefmt
```

```
\renewcommand{\glstreenamefmt}[1]{\glstreedefaultnamefmt{#1}}
```

```
\glstreegroupheaderfmt This command was only introduced to glossary-tree v4.22, so it may not be  
defined.
```

```
\def\glstreegroupheaderfmt#1{\glstreedefaultnamefmt{#1}}
```

```
\glstreenavigationfmt This command was only introduced to glossary-tree v4.22, so it may not be  
defined.
```

```
\def\glstreenavigationfmt#1{\glstreedefaultnamefmt{#1}}
```

```
\glstreePreHeader Takes the label as the first argument and title as the second argument so this  
can be modified to add a bookmark.
```

```
\newcommand{\glstreePreHeader}[2]{}
```

```
\glstreeSubPreHeader{<previous group level>}{<level>}  
{<parent label>}{<group label>}{<title>}
```

```
\glstreeSubPreHeader
```

```
\newcommand{\glstreeSubPreHeader}[5]{}
```

```
}
```

```
{}
```

The index style is redefined so that the space before the number list isn't hard coded.

```
\ifdef{\@glsstyle@index}  
{
```

```
\glstreeprelocation The space before the number list for top-level entries. This is shared by the  
other tree styles.
```

```
\newcommand*\glstreeprelocation{\glxtrprelocation}
```

`\glstreechildprelocation` The space before the number list for child entries. This is shared by the other tree styles.

```
\newcommand*\glstreechildprelocation{\glstreeprelocation}
```

Don't prohibit a page break at the start of a new group if there's no header.

`\glstreegroupskip`

```
\newcommand{\glstreegroupskip}{\indexspace}
```

`\glstreegroupheaderskip` This doesn't include `\@afterheading` as it can cause interference with some styles.

```
\newcommand{\glstreegroupheaderskip}{\nopagebreak\glstreegroupskip\nobreak}
```

Modify the index style.

```
\renewglossarystyle{index}{%
  \renewenvironment{theglossary}%
    {\setlength{\parindent}{0pt}%
     \setlength{\parskip}{0pt plus 0.3pt}%
     \let\item\glstreeitem
     \let\subitem\glstreesubitem

\ProvidesPackage{glossary-bookindex}[2025/01/03 v1.54 (NLCT)]
```

Load required packages.

```
\RequirePackage{multicol}
\RequirePackage{glossary-tree}
```

`\glstrbookindexcols` Number of columns.

```
\newcommand{\glstrbookindexcols}{2}
```

`\glstrbookindextarget` Create the target for top-level items.

```
\newcommand*{\glstrbookindextarget}[2]{\glstarget{#1}{#2}}
```

`\glstrbookindexsubtarget` Create the target for child items.

```
\newcommand*{\glstrbookindexsubtarget}[2]{\glstrbookindextarget{#1}{#2}}
```

`\glstrbookindexname` Format used for top-level entries. (Argument is the label.)

```
\newcommand*{\glstrbookindexname}[1]{\glossentryname{#1}}
```

`\glstrbookindexsubname` Format used for sub entries.

```
\newcommand*{\glstrbookindexsubname}[1]{\glstrbookindexname{#1}}
```

`\glstrprelocation` Provide in case glossaries-stylemods isn't loaded.

```
\providecommand*{\glstrprelocation}{\space}
```

`\glxtrbookindexprelocation` Separator used before location list for top-level entries. Version 1.22 has removed the `\ifglsnopostdot` check since this style doesn't display the description.

```
\newcommand*\glxtrbookindexprelocation[1]{%
  \glxtrifhasfield{location}{#1}%
  {,\glxtrprelocation}%
  {\glxtrprelocation}%
}
```

`\glxtrbookindexsubprelocation` Separator used before location list for sub-entries.

```
\newcommand*\glxtrbookindexsubprelocation[1]{%
  \glxtrbookindexprelocation{#1}%
}
```

`\glxtrbookindexlocation`

```
\glxtrbookindexlocation{\label}{\location}
```

Displays the location.

```
\newcommand*\glxtrbookindexlocation[2]{#2}
```

`\glxtrbookindexsublocation`

```
\glxtrbookindexlocation{\label}{\location}
```

Displays the location for sub-entries.

```
\newcommand*\glxtrbookindexsublocation{\glxtrbookindexlocation}
```

`\glxtrbookindexparentchildsep` Separator used between top-level parent and child entry.

```
\newcommand{\glxtrbookindexparentchildsep}{\nopagebreak}
```

`\glxtrbookindexparentschildsep` Separator used between sub-level parent and child entry.

```
\newcommand{\glxtrbookindexparentschildsep}{\glxtrbookindexparentchildsep}
```

`\glxtrbookindexbetween` Between two top-level entries identified by the labels in the arguments.

```
\newcommand{\glxtrbookindexbetween}[2]{}
```

`\glxtrbookindexsubbetween` Between two level 1 entries identified by the labels in the arguments.

```
\newcommand{\glxtrbookindexsubbetween}[2]{}
```

`\glxtrbookindexsubsubbetween` Between two level 2 entries identified by the labels in the arguments.

```
\newcommand{\glxtrbookindexsubsubbetween}[2]{}
```

`\glxtrbookindexatendgroup` At the end of a letter group. The argument is the label of the last top-level entry.

```
\newcommand{\glxtrbookindexatendgroup}[1]{}
```

`\glxtrbookindexsubatendgroup` At the end of a letter group. The argument is the label of the last level 1 entry.

```
\newcommand{\glxtrbookindexsubatendgroup}[1]{}
```

`\glstrbookindexsubsubatendgroup` At the end of a letter group. The argument is the label of the last level 2 entry.
`\newcommand{\glstrbookindexsubsubatendgroup}[1]{}`

`\glstrbookindexgroupskip` Group separator.
`\newcommand{\glstrbookindexgroupskip}{\ifglsnogroupskip\else\indexspace\fi}`

`\glstrbookindexpregroupskip` After group header. The argument is the skip that would normally be inserted if there wasn't a group header.
`\newcommand{\glstrbookindexpregroupskip}[1]{#1}`

`\glstrbookindexpostgroupskip` After group header.
`\newcommand{\glstrbookindexpostgroupskip}{\indexspace}`

`\glstrbookindexpresubgroupskip{<default>}{<prev group level>}{<group level>}`

`\glstrbookindexpresubgroupskip` Before sub-group separator. The first argument is the skip that would normally be used at this point if there wasn't a header.
`\newcommand{\glstrbookindexpresubgroupskip}[3]{\par\medskip}`

`\glstrbookindexpostsubgroupskip` After sub-group separator.
`\newcommand{\glstrbookindexpostsubgroupskip}[2]{\par\medskip}`

`\glstrbookindexsubsubitem` Sub-sub item and lower. The argument is the level, which will be 2 or more.
`\newcommand{\glstrbookindexsubsubitem}[1]{\glstreesubsubitem}`

Format group title.

`\glstrbookindexformatheader` Group header.
`\newcommand*{\glstrbookindexformatheader}[1]{%`
`\par{\centering\glstreegroupheaderfmt{#1}\par}%`
`}`

Format sub-group title.

`\glstrbookindexformatsubheader` Sub-group header. This defaults to the same format as the top-level group.
`\newcommand*{\glstrbookindexformatsubheader}[5]{%`
`\ifnum#2>1\relax`
`\glstrbookindexsubsubitem{#2}\glstreegroupheaderfmt{#5}%`

```
\glslongextraNameFmt{<label>}
```

`\glslongextraNameFmt`

Governs the way the name is displayed.

```
\newcommand*\glslongextraNameFmt}[1]{%  
  \glsentryitem{#1}\glstarget{#1}{\glossentryname{#1}}%  
}
```

`\glslongextraDescFmt`

`\glslongextraDescFmt{<label>}`

Governs the way the description is displayed.

```
\newcommand{\glslongextraDescFmt}[1]{%
  \glossentrydesc{#1}\glspostdescription
}
```

`\glslongextraSymbolFmt`

`\glslongextraSymbolFmt{<label>}`

Governs the way the symbol is displayed.

```
\newcommand{\glslongextraSymbolFmt}[1]{\glossentrysymbol{#1}}
```

`\glslongextraSymbolTargetFmt`

`\glslongextraSymbolTargetFmt{<label>}`

Governs the way the symbol is displayed if it needs to include the target.

```
\newcommand{\glslongextraSymbolTargetFmt}[1]{%
  \glsentryitem{#1}\glstarget{#1}{\glslongextraSymbolFmt{#1}}
```

`\glslongextraSymbolOrName`

`\glslongextraSymbolOrName{<label>}`

Governs the way the symbol is displayed if it needs to include the target.

```
\newcommand{\glslongextraSymbolOrName}[1]{%
  \ifglshassymbol{#1}%
  {\glslongextraSymbolTargetFmt{#1}}%
  {\glslongextraNameFmt{#1}}%

```

`\glslongextraLocationFmt`

`\glslongextraLocationFmt{<label>}{<location list>}`

Governs the way the location is displayed.

```
\newcommand{\glslongextraLocationFmt}[2]{#2}
```

`\glslongextraShortTargetFmt`

`\glslongextraShortTargetFmt{<label>}`

Governs the way the short form is displayed if it needs to include the target.

```
\newcommand{\glslongextraShortTargetFmt}[1]{%
  \glsentryitem{#1}\glstarget{#1}{\glsxtrshort[noindex,hyper=false]{#1}}%
  \glsxtrpostnamehook{#1}%
}
```

`\glslongextraLongFmt`

`\glslongextraLongFmt{<label>}`

Governs the way the long form is displayed.

```
\newcommand{\glslongextraLongFmt}[1]{%
  {\glsxtrlong[noindex,hyper=false]{#1}}\glspostdescription
}
```

`\glslongextraSubNameFmt`

`\glslongextraSubNameFmt{<level>}{<label>}`

Governs the way the child name is displayed. Just does the sub-entry counter, if enabled, and the target.

```
\newcommand{\glslongextraSubNameFmt}[2]{%
  \glssubentryitem{#2}\glstarget{#2}{\strut}%
}
```

`\glslongextraSubDescFmt`

`\glslongextraSubDescFmt{<level>}{<label>}`

Governs the way the child description is displayed.

```
\newcommand{\glslongextraSubDescFmt}[2]{%
  \glslongextraDescFmt{#2}%
}
```

`\glslongextraSubSymbolFmt`

`\glslongextraSubSymbolFmt{<level>}{<label>}`

Governs the way the child symbol is displayed.

```
\newcommand{\glslongextraSubSymbolFmt}[2]{%
  \glslongextraSymbolFmt{#2}%
}
```

`\glslongextraSubSymbolTargetFmt`

`\glslongextraSubSymbolTargetFmt{<level>}{<label>}`

Governs the way the child symbol is displayed if the target is required.

```
\newcommand{\glslongextraSubSymbolTargetFmt}[2]{%
  \glssubentryitem{#2}\glstarget{#2}{\glslongextraSymbolFmt{#2}}%
}
```

`\glslongextraSubSymbolOrName`

`\glslongextraSubSymbolOrName{<level>}{<label>}`

Shows the symbol or the name (if the symbol isn't set) as the target for sub-entries.

```

\newcommand{\glslongextraSubSymbolOrName}[2]{%
  \ifglshassymbol{#2}%
    {\glslongextraSubSymbolTargetFmt{#1}{#2}}%
    {\glslongextraSubNameFmt{#1}{#2}}%
}

```

```

\def\@glslongextrawidestname{#1}%
\fi
}%
}

```

```
\glslongextraUpdateWidestChild{<level>}{<text>}
```

`\glslongextraUpdateWidestChild`

Used by `\glsxtrSetWidest` in `glossaries-extra-bib2gls`. Does nothing by default, since the default action in these styles is to omit the child name. If the child name should be displayed, then this needs to be redefined to use `\glslongextraUpdateWidest`.

```
\newcommand*{\glslongextraUpdateWidestChild}[2]{}
```

`\glslongextraSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have name and description columns.

```
\newcommand{\glslongextraSetDescWidth}{%
\glsmeasurewidth{\gls@tmplen}{\glslongextraHeaderFmt\entryname}%

```

Has the widest name been set.

```
\glsmeasurewidth{\dimen@}{\glsnamefont{\@glslongextrawidestname}}%
\ifdim\dimen@>\gls@tmplen
\gls@tmplen=\dimen@
\fi

```

Description width is `\linewidth` less `4\tabcolsep` less the width of the name column.

```
\setlength{\glsdescwidth}{\dimexpr\linewidth-4\tabcolsep-\gls@tmplen}%
}

```

`\glslongextraSymSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have name, symbol and description columns.

```
\newcommand{\glslongextraSymSetDescWidth}{%
```

Work out the size for just the name and description style.

```
\glslongextraSetDescWidth
```

Now work out the symbol column width. This is assuming that the column title will be the widest text in the column.

```
\glsmeasurewidth{\gls@tmplen}{\glslongextraHeaderFmt\symbolname}%

```

Subtract `2\tabcolsep` and the symbol header width.

```
\setlength{\glsdescwidth}{\dimexpr\glsdescwidth-2\tabcolsep-\gls@tmplen}%
}

```

`\glslongextraSymNoNameSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have symbol and description columns.

```
\newcommand{\glslongextraSymNoNameSetDescWidth}{%
```

Now work out the symbol column width. This is assuming that the column title will be the widest text in the column.

```
\glsmeasurewidth{\gls@tmplen}{\glslongextraHeaderFmt\symbolname}%
```

Subtract $4\tabcolsep$ and the symbol header width.

```
\setlength{\glsdescwidth}{\dimexpr\linewidth-4\tabcolsep-\gls@tmplen}%
}
```

`\glslongextraLocSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have name, location and description columns.

```
\newcommand{\glslongextraLocSetDescWidth}{%
```

Work out the size for just the name and description style.

```
\glslongextraSetDescWidth
```

Subtract $2\tabcolsep$ and the location list column width.

```
\setlength{\glsdescwidth}{\dimexpr\glsdescwidth-2\tabcolsep-\glspagelistwidth}%
}
```

`\glslongextraSymLocSetDescWidth` Computes the value of `\glsdescwidth` for the styles that have name, symbol, location and description columns.

```
\newcommand{\glslongextraSymLocSetDescWidth}{%
```

Work out the size for just the name, symbol and description style.

```
\glslongextraSymSetDescWidth
```

Subtract $2\tabcolsep$ and the location list column width.

```
\setlength{\glsdescwidth}{\dimexpr\glsdescwidth-2\tabcolsep-\glspagelistwidth}%
}
```

`\glslongextraShortNoNameSetDescWidth` Computes the value of `\glsdescwidth` for the styles that only have short and long columns. The long form will essentially be treated like a description column.

```
\newcommand{\glslongextraShortNoNameSetDescWidth}{%
```

Now work out the short column width. This is assuming that the column title will be the widest text in the column.

```
\glsmeasurewidth{\gls@tmplen}{\glslongextraHeaderFmt\glslongextraShortHeader}%
```

Subtract $4\tabcolsep$ and the above header width.

```
\setlength{\glsdescwidth}{\dimexpr\linewidth-4\tabcolsep-\gls@tmplen}%
}
```

`\ifGlsLongExtraUseTabular` If true use tabular instead of longtable. Obviously only intended for short glossaries that can fit into a single page.

```
\newif\ifGlsLongExtraUseTabular
\GlsLongExtraUseTabularfalse
```

`\glslongextraTabularVAlign` Only used with the tabular setting.

```

7 topic styles (glossary-topic.sty)

Provides “topic” styles where top-level entries are considered a topic.

```
\NeedsTeXFormat{LaTeX2e}
```

Rollback releases:

```
\DeclareRelease{v1.48}{2021-11-22}{glossary-topic-2021-11-22.sty}
\DeclareCurrentRelease{v1.54}{2025-01-03}
```

Declare package:

```
\ProvidesPackage{glossary-topic}[2025/01/03 v1.54 (NLCT)]
```

Load required package.

```
\RequirePackage{multicol}
```

The top-level entries act like headers. If the top-level entry has a description it’s placed below the name.

topic

```
\newglossarystyle{topic}{%
  \renewenvironment{theglossary}%
  {%
    \glstopicInit
    \def\glstopic@prechildren{}%
    \def\glstopic@prevlevel{-1}%
